Seven Additional Characters for Extension C
John H. Jenkins
26 November 2006

At the November 2006 joint meeting of the Unicode Technical Committee and INCITS subgroup L2 (the JTC1 TAG for WG2), Adobe proposed that the following seven characters be added to Extension C in order to provide round-trip compatibility with its own industrial standard.

The recommendation was accepted and the US will include the suggestion to add these characters to Extension C as part of its vote on Amendment 4 of ISO/IEC 10646.

The UTC wishes IRG members be aware of this position on the part of the US. If possible, the UTC would like the IRG to pass a resolution of support for (or, at the least, acceptance of) the American recommendation.
