Title: Preliminary Proposal from G-Source for WS202X

Status: Individual Contribution for #66

Action: To be considered by China and IRG

I. Purpose and Overview

This document presents a preliminary G-source submission for the next IRG Working Set. We have systematically reviewed several editions of the “Second Chinese Character Simplification Scheme (Draft)” (《第二次汉字简化方案（草案）》, hereafter “EJ”) and identified approximately 200 distinct Han ideographs that are not encoded in the current UCS repertoire.

For each candidate ideograph, we initially provide its representative glyph, the IDS, the Radical value, and the SC value. These data are compiled into a single table in Annex A. This pre-proposal is intended for initial discussion within IRG, in preparation for a later formal G-source submission to WS202X. In addition, we plan to carry out a Horizontal Extension of all encoded EJ characters in the coming years.

II. Rationale and Source Materials

The Second Chinese Character Simplification Scheme (Draft) is an officially compiled draft that was not fully implemented. Nevertheless, many of the forms it records remain of lasting interest for the digitization of historical materials, lexicographic work, and scholarly research on Chinese orthography.

For this pre-proposal, we have used three editions of EJ, represented by four different sources. For convenience, the “Source” column in Annex A uses the following short identifiers:

- EJ1975–DFT: 第二次汉字简化方案（草案），中国文字改革委员会，1975年5月
- EJ1977–PUB: 第二次汉字简化方案（草案），文字改革出版社，1977年12月第1版
- EJ1977–JZB: 《简化字总表》（第二版）：附《第二次汉字简化方案（草案）》第一表，文字改革出版社，1977年12月第3版
- EJ1981–REV: 第二次汉字简化方案（修订草案），中国文字改革委员会，1981年8月

In several cases, these sources give different second-simplified forms for what is historically the same underlying character. At this stage, we regard each distinct glyph forms attested in these sources as a separate candidate for encoding. Consequently, such forms are listed separately in Annex A, each with its own G-Source serial number and explicit source indication, so that IRG experts can discuss whether they should be unified or encoded separately during this meeting.
