

Complete Charts for PRI 183: Supplementary registration of the AdobeJapan1 collection and of sequences in that collection

June 24, 2011

These charts show the representative glyphs for the 32 Ideographic Variation Sequences proposed in PRI 183: *Supplementary registration of the AdobeJapan1 collection and of sequences in that collection*. For more details on this submission, please see <http://www.unicode.org/ivd/pri/pri183/>.

These charts are indexed by the code point of the Base Character, sorted in code point order, and display for each proposed sequence:

- ▶ the corresponding glyph in Kozuka Mincho Pr6N R; the glyph of the Base Character is provided in lenticular brackets for reference purposes, and for convenience, if it differs from this glyph
- ▶ the sequence identifier in the form of the corresponding Adobe-Japan1-x CID
- ▶ the line to be added to the *IVD_Sequences.txt* file, but without a Variation Selector specified

These complete charts show all the sequences which are proposed.

Note that the AdobeJapan1 collection as registered on December 14, 2007 intentionally included two pairs of sequences that correspond to the same sequence identifier, as follows:

Sequence Identifier	Registered AdobeJapan1 Sequences			
	Base Character	Variation Selector	Base Character	Variation Selector
cid13912 達	9039 【達】	E0101	9054 【達】	E0101
cid19071 鴉	29FCE 【鴉】	E0100	29FD7 【鴉】	E0100

PRI 183 intentionally proposes 12 sequences that will result in 12 additional pairs of sequences that correspond to the same sequence identifier, as shown in the table below:

Sequence Identifier	Registered AdobeJapan1 Sequence		PRI 183
	Base Character	Variation Selector	Base Character
