Doc Type: Working Group Document**Title: Proposal for encoding the Meroitic script in the SMP of the UCS****Source: UC Berkeley Script Encoding Initiative (Universal Scripts Project)****Author: Michael Everson****Status: Liaison Contribution****Action: For consideration by JTC1/SC2/WG2 and UTC****Date: 2009-05-13**

This document replaces N3484 (2008-08-04), N2134 (1999-10-02), N1638 (1997-09-18), and contains the proposal summary form.

1. Introduction. The Meroitic script appeared with the rise of the Meroitic Kingdom in the third century BCE, though Egyptian writing (both hieroglyphic and demotic) would certainly have been known and was used previously in the Nubian city of Meroë, a city which is about 6 km north-east of the modern Kabushiya station near Shendi, Sudan, about 200 km north-east of modern Khartoum. Meroitic was used until some time after the fall of the Meroitic Empire in the first half of the fourth century CE. The values of the script's characters are known, but the language itself remains unknown, apart from names and a few other words.

2. Structure. The script has a monumental form, derived from Egyptian Hieroglyphs, and a cursive form, derived from Egyptian Demotic, which was used considerably more frequently than the monumental form. Although there is a relationship between Hieroglyphic Meroitic (*l'écriture hiéroglyphique méroïtique*) and Cursive Meroitic (*l'écriture cursive méroïtique*), the argument that the two should be treated as font variants is not compelling. Publications which cite Meroitic in the original script rather than in transliteration regularly preserve the distinction between Hieroglyphic and Cursive script forms. Essentially, there is no usage requirement where any text written in Hieroglyphic Meroitic would be converted into Cursive, or vice versa. Hieroglyphic Meroitic is only used to write texts which were written in Hieroglyphic Meroitic, and Cursive Meroitic is only used to write texts which were written in Cursive Meroitic. The Meroitic script is essentially two script forms used concurrently, but not interchangeably, for the same language. Scholars distinguish, and need to be able to distinguish, in plain text, Hieroglyphic Meroitic from Cursive Meroitic.

Moreover, in origin the two script forms differ historically. Cursive Meroitic developed over a period of time. Most of its characters are very close to the old Ptolemaic demotic of Upper Egypt (332-186 BCE), in particular / O, // YA, X PA, ω RA, ʒ KHA *ha*, ʒ SA, ʒ QA, and the numbers 6, 8, 9, 20, 50, 70, 80, 100, 200, 300, and 800. Rilly 2007:247-262 gives a complete discussion of the origin of each individual Cursive character.

Like Cursive Meroitic, Hieroglyphic Meroitic is first known in various forms dating to the reign of Taneyidamani, at the end of the 2nd century BCE. But whilst the goal of Cursive writing was practical, it appears that the development of the Hieroglyphic form was based in the desire to possess a monumental and decorative version of the Cursive form, and also to participate in the magic power attributed to

Egyptian Hieroglyphs. The set of characters devised for Hieroglyphic all have direct parallels with Egyptian Hieroglyphs, and is larger than that of Cursive Meroitic, which relates not to Egyptian Hieroglyphs, but to the demotic script which is not unified with the Hieroglyphs. One of the reasons Hieroglyphic Meroitic is larger is an evident uncertainty in which Egyptian characters were to be used for various sounds; both and are used for *b*—the former (the ram) having the value *b*; in Egyptian, the latter (the foot) simply *b*. These are also distinguished in current fonts. There is no purely one-to-one relationship between Cursive and Hieroglyphic Meroitic. Hieroglyphic Meroitic is used only for formal inscriptions. There are no private documents written in it.

The two script forms of Meroitic are treated in this encoding as two *separate* scripts and are encoded in two separate blocks, Meroitic Hieroglyphs and Meroitic.

3. Directionality. The direction of writing is right-to-left, evidently with no exceptions. Unlike Egyptian, where one reads into the faces of the people and animals, in Meroitic, the reading direction follows the way the people and animals are looking. Thus, using arrows to indicate the reading direction, the name *Amūn* (*Imn*, god of Thebes) would be written as *amana* in Meroitic ← *na-ma-a* ←; in Egyptian Hieroglyphs this would be written ← with right-to-left directionality, → with left-to-right directionality. Another way of visualizing this would be that if the *cognate* Egyptian characters were written with right-to-left directionality, they would appear reversed from the Meroitic point of view, thus: Meroitic ←, Egyptian * ←.

4. Punctuation. Word dividers are employed more or less regularly, to isolate not separate words, but basic elements of sentences—nominal phrases (noun and article, noun and adjective and article, etc) verbal forms, and so on. Three vertical dots are used in Hieroglyphs and early Cursive, though when the Hieroglyphs are set in vertical columns, three horizontal dots are used. It would seem that U+205D TRICOLON ∴ and U+2026 HORIZONTAL ELLIPSIS … can serve this function. In later Cursive texts this became reduced to a COLON :, used with some irregularity.

5. Numbers. Meroitic numbers are fairly well known. Ones, tens, hundreds, and thousands are known; characters for 60, 90, and 900 are not yet known; neither are the numbers for 4,000, 6,000, 7,000, 8,000, and 9,000, though the number for 10,000 is cited in secondary literature (a number chart, see Figure 4). There is a system to the number shapes, as there are in Egyptian Hieratic, so gaps have been left in the code table for the numbers as yet unattested.

6. Ordering. Meroitic ordering interfiles the Cursive and Hieroglyphic script forms as well as the encoded variants:

>> *a^h* > *e^c* >> *e^h* > *o^c* >> *o^h* > *i* >> *i* > *ya^c* >> *ya^h* >
wa^c >> *wa^h* > *ba^c* >> *ba^h* >> *ba^{h2}* > *pa^c* >> *pa^h* > *ma^c* >> *ma^h* >
na^c >> *na^h* >> *na^{h2}* > *ne^c* >> *ne^h* >> *ne^{h2}* > *ra^c* >> *ra^h* >> *ra^{h2}* >
la^c >> *la^h* > *ha^c* >> *ha^h* > *ha^c* >> *ha^h* > *sa^c* >> *sa^{c2}* >> *sa^h* >> *sa^{h2}* >
se^c >> *se^h* > *ka^c* >> *ka^h* > *qa^c* >> *qa^h* > *ta^c* >> *ta^h* >> *ta^{h2}* >
te^c >> *te^h* >> *te^{h2}* > *to^c* >> *to^{h2}* > *da^c* >> *da^h*

7. Names. Meroitic has four vowels, namely *a*, *e*, *i* and *o* and a semivowel *y*. The vowel *a* is only written when it is an initial; *e*, *i*, and *o* are also written within words. Meroitic has two types of consonants. A few consonants are combined with a vowel, namely *ne*, *se*, *te*, and *to*; the other consonants are single consonants, each of which is followed by a vowel (*e*, *i*, *o*) in the inscriptional records. If there is no vowel inserted between two consonants, the consonant is read with an inherent *a*. For example, the Meroitic royal title is *qore*, written or (*q + o + r + e*); the title of the supreme commander of the

army is *paqara*, written $\omega \rho \xi$ or $\cdot \square \Delta \xi$ ($p + q + r$). In the character names, the inherent *-a* is used for the consonants and the rest of the names follow the usual UCS conventions.

8. Issues. At least twenty-four symbols are known, many used in conjunction with numbers and are perhaps determinatives of different types of goods. A number of these with very similar glyphs may not be unique characters at all. Further study of these is required. They are left for future standardization.

9. Unicode Character Properties.

Figures

The following is a list of the Meroitic alphabet in order according to the values of the signs. The evidence for the values given will be found in the detailed discussion of the signs below:—

(1)  initial <i>a</i> or alif.	(12)  <i>w r</i> .
(2)  vowel <i>e</i> (earlier sometimes <i>ye</i>).	(13)  <i>l</i> , older  .
(3)  vowel <i>i</i> .	(14)  <i>l</i> .
(4)  vowel <i>i</i> (earlier sometimes <i>yi</i>).	(15)  <i>l</i> .
(5)  <i>y</i> .	(16)  <i>s(c)</i> .
(6)  <i>w</i> .	(17)  <i>s</i> .
(7)  <i>b</i> .	(18)  <i>k</i> .
(8)  <i>p</i> .	(19)  <i>q</i> , older  .
(9)  <i>m</i> .	(20)  <i>t(i)</i> .
(10)  <i>n</i> .	(21)  <i>te</i> , older  .
(11)  <i>n(i)</i> older  .	(22)  <i>t</i> .
	(23)  <i>s</i> (?), older  .

The hieroglyphic letters in brackets are forms occurring in the inscription *Meroë* 1 and sometimes elsewhere.

The above scheme of the alphabet shows a close connexion with Egyptian values for the signs.  like  appears to be a reduplication of the corresponding Egyptian sign.  for *l* and  for *r* seem to be the only signs devoid of any probable explanation from the Egyptian side: and the value of  is as yet only guessed.

The demotic letters, 5 , 9 , 16 , 17 , resemble the Egyptian demotic signs. The rest show no such resemblance, but may have been derived by a long process from some form of hieratic, or more directly from the hieroglyphic.

Figure 1. Table from Griffith 1911 showing the alphabet in both Hieroglyphic and Cursive Meroitic.

INDEX C

MEROITIC WORDS AND GROUPS

Abbreviations:—n. personal name, n. A. name of deceased, n. AA. of second deceased, n. B. of mother (n. BB. &c.), n. C. of father (n. CC. &c.); pl. n., place name; form. A B C D &c., terminal formulae A B C D &c., see Ch. V, p. 42; inv., invocation, see Ch. III, p. 33; descr., occurring in descriptive phrases, see p. 38. Eg., Egyptian. Titles are roughly divided as civil and sac(er)dotal).

Figure 7. Table from Rilly 2007 showing texts in both Hieroglyphic and Cursive Meroitic.

A. Administrative

1. Title

Proposal for encoding the Meroitic script in the SMP of the UCS

2. Requester's name

Michael Everson

3. Requester type (Member body/Liaison/Individual contribution)

Individual contribution.

4. Submission date

2009-05-13

5. Requester's reference (if applicable)

6. Choose one of the following:

6a. This is a complete proposal

No.

6b. More information will be provided later

Yes.

B. Technical – General

1. Choose one of the following:

1a. This proposal is for a new script (set of characters)

Yes.

1b. Proposed name of script

Meroitic Hieroglyphs and Meroitic.

1c. The proposal is for addition of character(s) to an existing block

No.

1d. Name of the existing block

2. Number of characters in proposal

30.

3. Proposed category (A-Contemporary; B.1-Specialized (small collection); B.2-Specialized (large collection); C-Major extinct; D-Attested extinct; E-Minor extinct; F-Archaic Hieroglyphic or Ideographic; G-Obscure or questionable usage symbols)

Category E.

4a. Is a repertoire including character names provided?

Yes.

4b. If YES, are the names in accordance with the "character naming guidelines" in Annex L of P&P document?

Yes.

4c. Are the character shapes attached in a legible form suitable for review?

Yes.

5a. Who will provide the appropriate computerized font (ordered preference: True Type, or PostScript format) for publishing the standard?

Michael Everson.

5b. If available now, identify source(s) for the font (include address, e-mail, ftp-site, etc.) and indicate the tools used:

Michael Everson, Fontographer.

6a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided?

Yes.

6b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached?

Yes.

7. Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)?

Yes.

8. Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at <http://www.unicode.org> for such information on other scripts. Also see Unicode Character Database <http://www.unicode.org/Public/UNIDATA/UnicodeCharacterDatabase.html> and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

See above.

C. Technical – Justification

1. Has this proposal for addition of character(s) been submitted before? If YES, explain.

No.

2a. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)?

Yes.

2b. If YES, with whom?

Richard Lobban, Reginald Smith, Claude Rilly, Michael Zach

2c. If YES, available relevant documents

3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included?

Small community, scholars and historians.

4a. The context of use for the proposed characters (type of use; common or rare)

Scholarly use.

4b. Reference

5a. Are the proposed characters in current use by the user community?

Yes.

5b. If YES, where?

Worldwide.

6a. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP?

No.

6b. If YES, is a rationale provided?

6c. If YES, reference

7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)?

Yes.

8a. Can any of the proposed characters be considered a presentation form of an existing character or character sequence?

No.

8b. If YES, is a rationale for its inclusion provided?

8c. If YES, reference

9a. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters?

No.

9b. If YES, is a rationale for its inclusion provided?

9c. If YES, reference

10a. Can any of the proposed character(s) be considered to be similar (in appearance or function) to an existing character?

Yes.

10b. If YES, is a rationale for its inclusion provided?

Yes.

10c. If YES, reference

Similarity to Egyptian hieroglyphs is genetic but superficial.

11a. Does the proposal include use of combining characters and/or use of composite sequences (see clauses 4.12 and 4.14 in ISO/IEC 10646-1: 2000)?

No.

11b. If YES, is a rationale for such use provided?

11c. If YES, reference

11d. Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided?

No.

11e. If YES, reference

12a. Does the proposal contain characters with any special properties such as control function or similar semantics?

No.

12b. If YES, describe in detail (include attachment if necessary)

13a. Does the proposal contain any Ideographic compatibility character(s)?

No.

13b. If YES, is the equivalent corresponding unified ideographic character(s) identified?
