**Date:** 2010-01-25

## 1 Introduction

Landa is a writing system of South Asia that was used in the regions of Punjab and Sindh. It is a Brahmi-based script that is descended from Sharada and related to the Takri script (see Figure 1 and Figure 2). The name ‘Landa’ (*lanḍā*) means ‘clipped’ and refers to certain characteristics of the script, such as the absence of vowel signs, the use of a single letter for representing an aspirated and unaspirated consonant pair, the absence of word spacing and punctuation, and other shorthand practices. There is no standard form of Landa and given its large geographic distribution, the script became regionally differentiated through its use by various merchant communities and administrative bodies. These varieties of Landa may be grouped into the two regional typological sub-classes of ‘Punjabi’ and ‘Sindhi’. Although Landa is considered an ‘incomplete’ mercantile script, some varieties were reformed into literary and administrative scripts in order to meet the requirements of religious and social communities in Punjab and Sindh.

In the *Linguistic Survey of India*, George Grierson called Landa the “true alphabet of the Punjab”.<sup>1</sup> As the popular script of Punjab, Landa served as the model for the Gurmukhi script, which was designed in the 16th century by Angad, the second Sikh Guru, for the purpose of recording the teachings of Guru Nanak. Similarly, the forms of Landa used in Multan were adapted for printing by the Baptist Missionary Press, who developed metal types for Multani in order to produce Christian literature in the Siraiki language. Writing in 1916, Grierson noted that Landa was “current all over the Punjab, and is especially used by shop-keepers”.<sup>2</sup> Now, nearly a century later, Landa is present in Punjab only through its Gurmukhi descendent; the Multani form of Landa is now written in the Arabic script. However, it is possible that Landa is still maintained informally for mercantile purposes in the region.

In Sindh, the Landa script is known as “*Baniyā*” or “*Wāṇikō*”,<sup>3</sup> names which allude to the mercantile nature of the script. By the 16th century, the Lohanaki variety of Landa was reformed to create an ecclesiastical script known as Khojki. Believed to have been introduced by Pir Sadruddin, an Ismaili missionary working with the Lohana merchant community, Khojki was used to record the *ginān* literature of the Nizari Ismaili sect. Khojki is still used by Ismailis in South Asia and was exported to east Africa, Canada, and other areas where the South Asian Ismaili diaspora settled. The Khojki script has been proposed for encoding in the UCS.<sup>4</sup> In the administrative sphere, the British government of Sindh developed a standard Sindhi script in 1868 that was called ‘Hindu Sindhi’.<sup>5</sup> This Standard Sindhi was used in education, book printing, and in courts. Sindhi is now written in the Arabic and Devanagari scripts; however, attempts have been made to revive *haṭa-vāṇikā* “merchant’s alphabet”,<sup>6</sup> and it is possible that the Landa-based scripts are used informally by Sindhi speakers.

## 2 Analysis

Based upon typological differences that correlate with regional distribution, Landa may be divided into the ‘Punjabi’ and ‘Sindhi’ sub-classes. The primary differences between the Punjabi and Sindhi forms are character repertoire, glyph shapes, collation patterns, and orthographic practices. Additionally, local forms within the Punjabi and Sindhi sub-classes also exhibit differences from other members within their respective regional sub-classes.

The division of Landa into regional sub-classes is supported by primary and secondary sources. In *Grammar of the Sindhi Language* (1849), George Stack presented twelve sub-regional varieties of Landa used in Sindh and one form used in Punjab. George Grierson (1916) shows two different forms of Landa used in Punjab, of which one is the form used in Multan. William Leitner (1882) shows specimens and comparative tables of at least six forms of Landa used in Punjab and numerous local varieties used in Sindh. The nomenclature used to classify these forms of Landa is not uniform. Some scripts are named after the languages and dialects they are used for writing and others are given names of the regions or communities with which they are associated. Based on the above and other sources, an attempt is made below to classify various names given to Landa-based scripts according to their regional affiliation:

- *Punjabi*: Bhawalpuri, Gurmukhi, Landa, Lamawasi, Multani (Karikki, Lahnda, Ochiki Punjabi, Southern Lahnda), Thul (Dehrajat), Sarika (Dehrajat)
- *Sindhi*: Arora, Baniya, Bhatia, Haidarabadi, Karadi, Khudawadi, Khwaja (Khojki), Hatvanika, Landa, Larai, Lohanaki (Lohana), Maimon, Rajai, Sakkar, Shikarpuri, Sewhani Bhabhira, Thatta (Thattai), Vaniya, Wangai, Waniko

The differences between Punjabi and Sindhi forms of Landa is exemplified in Figure 3. This figure depicts written specimens of Standard Sindhi and a form of Landa used for writing Multani (Siraiki), a language spoken in Punjab. Figure 4 shows the differences between printed forms of Sindhi and Multani. The shapes of characters and style of writing are entirely different. Another comparison of the Punjabi and Sindhi forms

is made in Figure 5. In Figure 6, ‘Landa’ and ‘Multani’ are shown separately and ‘Landa’ is shown as the class name for ‘Khudawadi’ and ‘Sindhi-Schrift’ scripts. The variety of Landa forms used in Punjab is shown in Figure 10.

The regional forms are strongly influenced by the phonemic repertoire of local languages and, therefore, the Sindhi forms possess characters not found in the Punjabi varieties. General differences between the two sub-classes are:

- *Character repertoire:* Character repertoire is a major distinguishing factor between Punjabi and Sindhi forms of Landa. The Sindhi forms have characters for the Sindhi implosives (corresponding to the Devanagari letters GGA, JJA, DDDA, and BBA), which are not found in Punjabi or other Indo-Aryan languages.
- *Glyph shapes:* Based upon analysis of common letters such as  $\Lambda$  and  $\text{KA}$  it is possible to determine by glyph shape whether a script belongs to the Punjabi or Sindhi sub-class.
- *Orthography:* Vowel signs were introduced into Sindhi forms of Landa as part of standardization. The Punjabi forms of Landa do not use vowel signs; the vowel letter is often written with a consonant letter to indicate the composition of a syllable, eg. *ki* would be written as LETTER KA + LETTER I.
- *Collation order:* The collation order for the Punjabi and Sindhi forms are different; Punjabi Landa follows the sort order for Gurmukhi, which places  $\text{SA}$  and  $\text{HA}$  at the head of the consonants, while Sindhi Landa follows the Devanagari order.

### 3 Recommendation

For the purposes of encoding Landa in the UCS, it is recommended that the Punjabi and Sindhi sub-classes be encoded separately. Encoding a unified Landa block that may be used for both Punjabi and Sindhi regional forms is impractical because such an approach requires identifying a form of Landa that could adequately represent the character repertoires and glyph shapes used in Punjab as well as in Sindh. Furthermore, such a unified encoding for Landa would result in the unification of at least twenty different scripts.

Encoding the Punjabi and Sindhi forms separately offers a more effective means for managing the various regional forms of Landa on a model that adheres to the structural differences between the two sub-classes. Thus, a block to be named ‘Sindhi’ will serve to unify local Sindhi scripts such as Khudawadi, Shikarpuri, etc. The characters will be based upon the Standard Sindhi script. As Landa is considered by Grierson to be the “true alphabet of the Punjab”, it is recommended that the name ‘Landa’ be retained as the name of the block that will unify the regional Landa forms of Punjab.

The ‘Landa’ and ‘Sindhi’ blocks will provide an effective means for managing the Landa family of scripts through unification. However, some of the scripts belonging to these sub-classes may be encoded as independent scripts, depending upon user requirements and other factors. Khojki is one such example; Multani may prove to be another. The following proposals have been submitted in support of this recommendation:

- L2/10-012 “Preliminary Proposal to Encode the Sindhi Script in ISO/IEC 10646”
- L2/10-013 “Preliminary Proposal to Encode the Landa Script in ISO/IEC 10646”

The present document is intended to accompany the above proposals. The individual proposals for encoding the Landa and Sindhi scripts provide additional details and specimens, including code charts and nameslists.

Figure 6: A chart showing the scripts of the Sharada family (from Jensen 1969: 366). The ‘Khudawadi’ and ‘Sindhi-Schrift’ are shown as forms of ‘Landa’, while ‘Multani’ is classified separately. Here, the ‘Landa’ scripts refer to those used in Sindh; the ‘Multani’ represents the Punjabi style.

SINDH- UND MULTANSCHRIFT.

Sindh		Multan		Sindh		Multan		Sindh		Multan	
Zeichen	Wert	Zeichen	Wert	Zeichen	Wert	Zeichen	Wert	Zeichen	Wert	Zeichen	Wert
᳚	a	᳚	a	᳚	ña, ña			᳚	pha	᳚	pha
᳛	i	᳛	i	᳛	ṭa			᳛	ba	᳛	ba
᳜	u	᳜	u	᳜	ṭha			᳜	bha		
᳝	ka	᳝	ka	᳝	ḍa	᳝	ḍa	᳝	ma	᳝	ma
᳞	kha	᳞	kha	᳞	ṇa	᳞	ṇa	᳞	ya	᳞	ya
᳟	ga	᳟	ga	᳟	ṭa	᳟	ṭa	᳟	ra	᳟	ra
᳠	gha			᳠	ṭha	᳠	ṭha	᳠	la	᳠	la
᳡	tša	᳡	tša	᳡	ḍa	᳡	ḍa	᳡	va	᳡	va
᳢	tšha	᳢	tšha	᳢	dha	᳢	dha	᳢	sa	᳢	sa
᳣	dža	᳣	dža	᳣	na	᳣	na	᳣	ha	᳣	ha
᳤	džha			᳤	pa	᳤	pa	᳤	tra	᳤	tra

Die vorstehenden Schriften sind in doppelter Art beachtenswert, erstens weil sie in gleicher Weise wie die semitischen Schriften die Vokale in der Mitte der Wörter nicht schreiben, z. B. Sindhisch  $\text{᳜᳚᳛}$  *tuhulžo*, zweitens weil ihre Zeichen sich an die semitischen Schriften anlehnen, andererseits sich in der Devanagarschrift vorfinden, wenn diese von der Paliform abweicht; so hat  $\text{᳚}$  dieselbe Bedeutung auf Pehlewi-Münzen,  $\text{᳛}$  entspricht dem  $\text{᳛}$  im Aramäischen,  $\text{᳜}$  erinnert an die phönikische Form  $\text{᳜}$ ,  $\text{᳝}$  an das phönikische  $\text{᳝}$ . Den von den Inschriftformen abweichenden Devanagarizeichen  $\text{᳝}$  *ka* entspricht Multan  $\text{᳝}$ , dem  $\text{᳞}$  *kha* (Inschrift  $\text{᳞}$ ) entspricht Sindh  $\text{᳞}$  *gha*,  $\text{᳟}$  kann ebensowohl von der Inschrift  $\text{᳟}$ , wie von Sindh  $\text{᳟}$  *ga* abstammen, dem  $\text{᳡}$  *tšha* entspricht Sindh  $\text{᳡}$  *tšha*, dagegen Inschrift  $\text{᳡}$  *tšha* dem Devanagari  $\text{᳡}$  *la*, Devanagari  $\text{᳢}$  hat seine Analogie nur in Sindh  $\text{᳢}$  (dagegen Inschrift  $\text{᳢}$  *ṇa*), ebenso  $\text{᳣}$  Sindh  $\text{᳣}$  (Inschrift  $\text{᳣}$ ),  $\text{᳤}$  *p*, Sindh  $\text{᳤}$  (Inschrift  $\text{᳤}$ ).

Die auffallenden Abweichungen der beiden Schriften von Sindh und Multan beweisen, dass von einer einfachen Entlehnung keine Rede sein kann, denn wir finden Sindh  $\text{᳡}$  *tša* als Multan  $\text{᳡}$  *ra*, Sindh  $\text{᳜}$  *tha* als Multan  $\text{᳜}$  *pha*, dagegen befindet sich Multan  $\text{᳡}$  *tšha* in Übereinstimmung mit Sindh  $\text{᳡}$  *tša*.

Mit Rücksicht auf die Einwanderung der arischen Stämme von Norden liegt die Vermuthung nahe, dass die vorstehenden Schriften des nördlichen Indiens den Grundstock der vedischen Schrift abgaben. Durch die Herrschaft der magadhischen Schrift während der Zeit, wo in ganz Vorderindien der Buddhismus herrschte, wurde die heimische Schrift in den Schatten gestellt. Man zog die fremde Schrift wegen ihres Reichthums an Zeichen und wegen ihrer festen Schreibregeln vor. So kam es, dass die heimische Schrift, welche sich trotzdem im Volke erhielt, zu den gelehrten Werken nicht verwendet und diesfalls die Devanagarschrift vorgezogen wurde.

i	ੳ	ای	ੳ	ੳ	ੳ	ੳ	ੳ	ੳ	ੳ	ੳ	ੳ	؛	؛	؛	؛	؛
e	ਅ	ਅ	ਅ	ਅ	ਅ	ਅ	ਅ	ਅ	ਅ	ਅ	ਅ	،	،	،	،	،
ɨ	ੲ	ੲ=ੳ	ੲ	ੲ	ੲ	ੲ	ੲ	ੲ	ੲ	ੲ	ੲ	ی	ی	ی	ی	ی
s	ਸ	ਸ=ਸ਼	ਸ	ਸ	ਸ	ਸ	ਸ	ਸ	ਸ	ਸ	ਸ	س	س	س	س	س
h	ਹ	ਹ	ਹ	ਹ	ਹ	ਹ	ਹ	ਹ	ਹ	ਹ	ਹ	ه	ه	ه	ه	ه
kh	ਖ	ਖ=ਖ਼	ਖ	ਖ	ਖ	ਖ	ਖ	ਖ	ਖ	ਖ	ਖ	ك	ك	ك	ك	ك
												ک	ک	ک	ک	ک

Figure 10: Chart comparing different forms of Landa used in Punjab (from Leitner 1882: App. VII, Part A, 6).

The Alphabet.

Roman characters.	Devanāgarī.	Khudawādī.*	Shikārpurī.	Sakkar.	THATTĀI.		Lāṭī.	Wangāl.	Rajjāl.	Khawājā.	MĀIMONS.		Sewhājī Bhabhira.	Southern Landa.
					Luhāns.	Bhātīas.					Thattā.	Haidarābād.		
a	अ	ṁ	ṁ	ṁ	ʼʼ^	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ
ā	आ	ṁ	ṁ	ṁ	ʼʼ~	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ
i	इ	†ṁ	†ṁ	†ṁ	ṁ.ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ
ī	ई	†ṁ	†ṁ	†ṁ	ṁ.ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ
u	उ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ
ū	ऊ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ
e	ए	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ
ai	ऐ	ṁ	ṁ	ṁ	ʼʼ~	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ
o	ओ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ
au	औ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ	ṁ

\* The Khudawādī is the character used at Haidarābād and by most of the respectable merchants throughout the country. That of the Shikārpur and Sakkar merchants differs but little from it.

† These are, however, never written in commencing a word. In lieu of them III is used.

Figure 11: Chart showing the different forms of Landa used in Sindh (from Grierson 1919: 15). The final column shows a Punjabi form. Adapted by Grierson from Stack (1849: 3-8). Chart continued in Figure 12.

The Alphabet.

Roman characters.	Devanagari.	Khudawadi.	Shikarpuri.	Sakkar.	THATTAL.			Wangal.	Rajjal.	Khawaja.	MALIMONS.		Sewnagi Bhabhira.	Southern Landa.
					Lahanda.	Bhatia.	Lari.				Thatta.	Haiderabad.
