This is a quick note on Michael Everson's document N4198 L2/12-039 which proposes two additional characters for Grantha.

Grantha NNNA

The attestation for NNNA is provided as:

taniślōkam

The author states that this is a Grantha text and as justification for this draws our attention to the stacked SHA above LA in ślō after the letter *ni* / णि / NNNI, noting that such stacking behaviour is not attested in Tamil, implying that this is therefore a Grantha text. He further states that the rest of the characters in this word are common to both Grantha and Tamil.

However, the vowel sign ோ combining with the very same stacked ślō is so far not attested in Grantha. Neither is the MA or pulli virama seen in ட at the end of the word. Both of these are so far attested only for Tamil.

Therefore this attestation is imperfect and cannot serve as sufficient basis for encoding a Grantha NNNA.

Grantha LLLA

For Grantha LLLA, this proposal provides only one attestation. It is recommended that further attestation be collected and provided before a proposal is made for Grantha LLLA.
