

Title: Preliminary Proposal to Encode the Rohingya Script
Source: Script Encoding Initiative (SEI)
Author: Anshuman Pandey (pandey@umich.edu)
Status: Liaison Contribution
Action: For consideration by UTC and WG2
Date: 2012-06-20

1 Introduction

This is a preliminary proposal to encode the Rohingya script in the Universal Character Set (ISO/IEC 10646). This document provides a brief description of the writing system, a code chart and names list, character data, and a few specimens. The glyphs used in the code chart are sourced from the “Rohingya Gonya Leyka Noories” typeface developed by Muhammad Noor, with some new glyphs produced by the present author. All information presented here is tentative and may change as a result of additional research. A formal proposal to encode the script will be submitted later.

2 Background

The Rohingya script is used for writing Rohingya (ISO 639-3: rhg), an Indo-Aryan language spoken by one million people in Myanmar (Rakhine State) and by two-hundred thousand people in Bangladesh (Cox’s Bazaar District). There are four different scripts used for writing Rohingya: Burmese, Arabic, the Latin-based ‘Rohingylish’, and the script described here, which was developed by Maulana Hanif in the 1980s.

The script is modeled upon the Arabic script and shows the influence of other scripts; however, it is a constructed script and has no genetic affiliation to other scripts.

There is limited information available on the Rohingya script in English. Most of the materials on the script are written in the Rohingya language. The Rohingya Language Committee and the Rohingya Education Board Myanmar have published primers of the script (see figures 3–7). There are also instructional videos available on YouTube (see figures 8–9). Two typefaces were developed for Rohingya by Muhammad Noor (see table 1).

3 Script Details

3.1 Structure

Rohingya is an alphabetic script that is written from right to left. Letters join to following letters at the right edge. The shapes of letters do not change. Vowels are always written.

3.2 Vowels

There is 1 vowel-carrier letter: ʝ VOWEL-CARRIER LETTER.

and 5 vowel letters:

AA I U E O

When written independently, the vowel-carrier letter represents the sound /a/. The vowel letters are never written independently or word-initially. When they occur in such contexts, they are written with the vowel-carrier letter and after the carrier.

3.3 Consonants

There are 28 consonants:

BA	XA	SA	WA
PA	FA	SHA	WWA
TA	DA	KA	YA
TTA	TAH	GA	YYA
JA	RA	LA	NGA
CA	RRA	MA	NYA
HA	ZAH	NA	QA

3.4 Nasalization

The NASAL LETTER is used for marking vowel nasalization. It is called *na konna* in Rohingya and is similar in function to U+06BA ARABIC LETTER NOON GHUNNA.

3.5 Gemination

The SIGN SHADDA indicates consonant gemination. It is called *tossi* in Rohingya and is similar in function to U+0651 ARABIC SHADDA.

3.6 ‘Sukun’

The SIGN SUKUN is written with certain consonant letters to indicate explicitly the absence of a vowel at the end of a word. The sign is also used for writing a letter when it occurs independently. It is called *sakin* in Rohingya and is similar in function to U+0652 ARABIC SUKUN.

In Rohingya, certain bare consonants are not represented using the SUKUN. See, for example, the isolated forms of the letters in figure 3.

Bare forms of certain letters are written using distinct glyphs: /m/ is represented as م instead of as $\text{م} \text{س}$ MA, SIGN SUKUN>; /l/ is represented as ل in some texts instead of as $\text{ل} \text{س}$ LA, SIGN SUKUN>.

3.7 Tonal Signs

1. ◌̣ TONE-1 This sign indicates short high tone. It is called *haar bay* in Rohingya. This tonal sign corresponds to U+08EA ARABIC TONE ONE DOT ABOVE and U+08ED ARABIC TONE ONE DOT BELOW.
2. ◌̤ TONE-2 This sign indicates long falling tone. It is called *thela* in Rohingya. This tonal sign corresponds to U+08EB ARABIC TONE TWO DOTS ABOVE and U+08EE ARABIC TONE TWO DOTS BELOW.
3. ◌̥ TONE-3 This sign indicates long rising tone. It is called *thana* in Rohingya. This tonal sign corresponds to U+08EC ARABIC TONE LOOP ABOVE and U+08EF ARABIC TONE LOOP BELOW.

3.8 Digits

There is a full set of decimal digits: ۰ ZERO, ۱ ONE, ۲ TWO, ۳ THREE, ۴ FOUR, ۵ FIVE, ۶ SIX, ۷ SEVEN, ۸ EIGHT, ۹ NINE. Similar to Arabic, the Rohingya digits are written from left to right. The Arabic style ۰ is attested as a glyphic variant for ۰ ZERO.

3.9 Punctuation

There is no script-specific punctuation. The U+002E FULL STOP is commonly used, as are Arabic signs, such as the ۰ U+060C ARABIC COMMA and ؟ U+061F ARABIC QUESTION MARK.

The ۰ TATWEEL is used for graphical elongation or justification. It is similar to the corresponding character U+0640 ARABIC TATWEEL.

6 Acknowledgments

I am thankful to Mattias Persson and Ian James for bringing the Rohingya script to my attention. Lorna Priest introduced me to James Lloyd-Williams, who very generously provided copies of Rohingya primers. The present work would not be possible without these materials.

This project was made possible in part by a grant from the United States National Endowment for the Humanities, which funded the Universal Scripts Project (part of the Script Encoding Initiative at the University of California, Berkeley). Any views, findings, conclusions or recommendations expressed in this publication do not necessarily reflect those of the National Endowment for the Humanities.
