January 1, 2016

1 Introduction

This is a proposal to encode the Nandinagari script in Unicode. It supersedes the following document:

- L2/13-002 “Preliminary Proposal to Encode Nandinagari in ISO/IEC 10646”

2 Description

Nandinagari is a Brahmi-based script that was used in southern India between the 8th and 19th centuries CE for producing manuscripts and inscriptions in Sanskrit in south Maharashtra, Karnataka and Andhra Pradesh. It was the official script of the Vijayanagara kingdom of southern India (1336–1646). There are numerous manuscripts and inscriptions bearing Nandinagari. Several of these manuscripts are biscriptal with text in the Kannada and Tigalari (Tulu) scripts. Nandinagari was also used for writing Kannada in Karnataka.

Nandinagari derives from the central group of ‘Nagari’ scripts and is related to Devanagari. There are several similarities between Nandinagari and Devanagari in terms of character repertoire, glyphic representation, and structure (see comparisons in tables 1–4). However, Nandinagari differs from Devanagari in terms of letterforms, the lack of a connecting headline, and in the rendering of consonant-vowel combinations and consonant conjuncts. There are several styles of Nandinagari, which are properly defined as variants of this particular type of ‘Nagari’ and do not resemble styles of other members of this class. As such, Nandinagari cannot be considered a stylistic variant of Devanagari. The independent status of Nandinagari is articulated by Saraju Rath (2009), who writes:

From statements in various early and recent secondary literature [...] one could infer that Nandināgarī, Nāgarī and Devanāgarī are very close and show only minor distinctions. From a study of the available evidence in manuscripts, however, it is clear that the scripts are indeed related as sister scripts, but that there are significant and systematic differences which justify us in considering them as different scripts. In the case of Nandināgarī the separate status is very clear but because of neglect and misleading statements in secondary literature it is frequently noted that scholars who try to read the script without proper preparation fail and have to give up.

Following the above, despite its similarities to Devanagari, Nandinagari cannot be unified with the ‘Devanagari’ encoding in Unicode. The proper representation of Nandinagari in plain text requires the preservation of the glyphic distinctions of its letterforms, consonant conjuncts, and consonant-vowel ligatures. The script also has its own historical styles and variant forms of letters, which diverge from Devanagari styles. Support for Nandinagari at the character level will provide for representation of the script in plain text. The block will, in turn, offer a means for unifying various styles of the script.

There is an active community of scholars conducting research on Nandinagari in the areas of epigraphy, preservation of manuscripts, and optical-character recognition. The Sri Vadiraja Research Foundation, sponsored jointly by the National Mission for Manuscripts of the Government of India and the Puttige Math in Udupi, Karnataka has been working to preserve Nandinagari palm leaf manuscripts from 2007 to the present (Prabhu 2012). The French Institute of Pondicherry has also digitized its collection of Nandinagari manuscripts and made them available online (see <http://apps.ifpindia.org/manuscripts/>). Study of Nandinagari is also advanced through the work of independent specialists with an interest in the script, who have analyzed manuscripts and produced character inventories (see, for example, figures 17–26). Moreover, there have been recent attempts to develop technologies for optical-character recognition of Nandinagari (Guruprasad *et al* 2011, 2013). An encoding for Nandinagari in the Unicode will help to advance research, study, and preservation of the script.

3 Script Details

3.1 Structure

The general structure (phonetic order, *mātrā* reordering, use of *virāma*, etc.) of Nandinagari is similar to that of Devanagari. Several consonant-vowel combinations are written as ligatures. Consonant clusters are represented as conjuncts. Some consonants have special behaviors when they occur conjuncts. The headstroke of Nandinagari letters do not join with preceding or following letters.

3.2 Character repertoire and representative glyphs

The proposed repertoire is based upon character inventories in manuscripts (see figures 1 and 2) and those published in secondary sources, such as Grünendahl (2001) and Visalakshy (2003). The representative glyphs are normalizations of forms attested in these sources. Several characters have variant forms and these are considered glyphic variants purposes of the encoding. The glyphs used here have been designed by the proposal author.

3.3 Vowels

There are 12 vowel letters:

𑌀	NANDINAGARI VOWEL LETTER A
𑌁	NANDINAGARI VOWEL LETTER AA
𑌂	NANDINAGARI VOWEL LETTER I
𑌃	NANDINAGARI VOWEL LETTER II
𑌄	NANDINAGARI VOWEL LETTER U
𑌅	NANDINAGARI VOWEL LETTER UU

ॐ	NANDINAGARI VOWEL LETTER VOCALIC R
ॐ	NANDINAGARI VOWEL LETTER VOCALIC RR
ॐ	NANDINAGARI VOWEL LETTER E
ॐ	NANDINAGARI VOWEL LETTER AI
ॐ	NANDINAGARI VOWEL LETTER O
ॐ	NANDINAGARI VOWEL LETTER AU

The ॐ VOWEL LETTER VOCALIC R and ॐ VOWEL LETTER VOCALIC RR are also represented as a consonant-vowel combination with the letter ॐ RA, as:

ॐ	<ॐ RA, ॐ VOWEL SIGN VOCALIC R>
ॐ	<ॐ RA, ॐ VOWEL SIGN VOCALIC RR>

Distinctive letters for *VOWEL LETTER VOCALIC L and *VOWEL LETTER VOCALIC LL are not attested, but space for them has been reserved in the event that an attestation is discovered. The sound of *VOWEL LETTER VOCALIC L is represented using the letter ॐ LA (see figure 1):

ॐ	<ॐ LA, ॐ VOWEL SIGN U>
---	------------------------

3.4 Vowel Signs

There are 11 dependent vowel signs:

ॐ	NANDINAGARI VOWEL SIGN AA
ॐ	NANDINAGARI VOWEL SIGN I
ॐ	NANDINAGARI VOWEL SIGN II
ॐ	NANDINAGARI VOWEL SIGN U
ॐ	NANDINAGARI VOWEL SIGN UU
ॐ	NANDINAGARI VOWEL SIGN VOCALIC R
ॐ	NANDINAGARI VOWEL SIGN VOCALIC RR
ॐ	NANDINAGARI VOWEL SIGN E
ॐ	NANDINAGARI VOWEL SIGN AI
ॐ	NANDINAGARI VOWEL SIGN O
ॐ	NANDINAGARI VOWEL SIGN AU

There is no dependent form for ॐ VOWEL LETTER A. This sound is the inherent vowel in each consonant letter. Distinctive forms for *VOWEL SIGN VOCALIC L and *VOWEL SIGN VOCALIC LL are not attested. Space is reserved for VOWEL SIGN VOCALIC L and VOWEL SIGN VOCALIC LL in the event that distinctive forms are identified.

The dependent vowel signs are combined with consonants in encoded representations as follows:

<i>cā</i>	वा	<व CA, ी VOWEL SIGN AA>
<i>ci</i>	वि	<व CA, ि VOWEL SIGN I>
<i>cī</i>	वी	<व CA, ी VOWEL SIGN II>
<i>cu</i>	वु	<व CA, उ VOWEL SIGN U>
<i>cū</i>	वु	<व CA, उ VOWEL SIGN UU>
<i>çṛ</i>	वृ	<व CA, ृ VOWEL SIGN VOCALIC R>
<i>çṝ</i>	वृ	<व CA, ृ VOWEL SIGN VOCALIC RR>
<i>ce</i>	वे	<व CA, े VOWEL SIGN E>
<i>cai</i>	वै	<व CA, ै VOWEL SIGN AI>
<i>co</i>	वो	<व CA, ो VOWEL SIGN O>
<i>cau</i>	वौ	<व CA, ौ VOWEL SIGN AU>

The ि NANDINAGARI VOWEL SIGN I is positioned at the top right of a consonant at the edge of the headstroke. The sign is often written such that its stroke straddles the headstroke at its midpoint.

Some consonant-vowel combinations may be rendered as ligatures.

<i>ku</i>	कु	<क KA, उ VOWEL SIGN U>
<i>kū</i>	कु	<क KA, उ VOWEL SIGN UU>
<i>kṛ</i>	कृ	<क KA, ृ VOWEL SIGN VOCALIC R>
<i>du</i>	डु	<ड DA, उ VOWEL SIGN U>

3.5 Consonants

There are 35 consonant letters:

क	NANDINAGARI LETTER KA
ख	NANDINAGARI LETTER KHA
ग	NANDINAGARI LETTER GA
घ	NANDINAGARI LETTER GHA
ङ	NANDINAGARI LETTER NGA
च	NANDINAGARI LETTER CA
छ	NANDINAGARI LETTER CHA
ज	NANDINAGARI LETTER JA

𑌦	NANDINAGARI LETTER JHA
𑌧	NANDINAGARI LETTER NYA
𑌨	NANDINAGARI LETTER TTA
𑌩	NANDINAGARI LETTER TTHA
𑌪	NANDINAGARI LETTER DDA
𑌫	NANDINAGARI LETTER DDHA
𑌬	NANDINAGARI LETTER NNA
𑌭	NANDINAGARI LETTER TA
𑌮	NANDINAGARI LETTER THA
𑌯	NANDINAGARI LETTER DA
𑌰	NANDINAGARI LETTER DHA
𑌱	NANDINAGARI LETTER NA
𑌲	NANDINAGARI LETTER PA
𑌳	NANDINAGARI LETTER PHA
𑌴	NANDINAGARI LETTER BA
𑌵	NANDINAGARI LETTER BHA
𑌶	NANDINAGARI LETTER MA
𑌷	NANDINAGARI LETTER YA
𑌸	NANDINAGARI LETTER RA
𑌹	NANDINAGARI LETTER LA
𑌺	NANDINAGARI LETTER VA
𑌻	NANDINAGARI LETTER SHA
𑌼	NANDINAGARI LETTER SSA
𑌽	NANDINAGARI LETTER SA
𑌾	NANDINAGARI LETTER HA
𑌿	NANDINAGARI LETTER LLA
𑍀	NANDINAGARI LETTER RRA

Each consonant letter bears the inherent vowel /a/. This inherent vowel is silenced using 𑌆 VIRAMA. Clusters of consonants are represented as conjuncts (see section 3.7).

The 𑍀 NANDINAGARI LETTER RRA is not part of the traditional consonant inventory. It appears to have been introduced in the 11th century for transcribing the Kannada letter 𑌆 U+0CB1 KANNADA LETTER RRA (see figure 3).

3.6 Virama

The 𑌵 NANDINAGARI SIGN VIRAMA has two functions, similar to the corresponding character of Devanagari. It is used as a *halanta* for marking the absence of the inherent vowel of a consonant letter. It is also a control character that is used for producing conjuncts.

The VIRAMA ligates with the base letter at the lower right edge:

k क् 𑌵 <क KA, 𑌵 VIRAMA>

c च् 𑌵 <च CA, 𑌵 VIRAMA>

3.7 Conjuncts

Consonant clusters are represented as conjuncts. It is appropriate to adopt the Devanagari model for producing conjuncts. The control character 𑌵 NANDINAGARI SIGN VIRAMA is placed after each non-initial consonant in a cluster, ie. <(C, 𑌵 VIRAMA)*, C>. This model also uses the generic control characters 𑌶 U+200D ZERO WIDTH JOINER (abbreviated as ZWJ) and 𑌷 U+200C ZERO WIDTH NON-JOINER (abbreviated as ZWNJ) for controlling alternate representations of conjuncts. Described below are the various ways of rendering conjuncts in Nandinagari and the proposed methods for their encoded representations.

Atomic ligatures Some clusters are represented using atomic or *akhaṇḍa* ligatures, in which the forms of the constituent letters are not readily recognizable. Examples of such ligatures are:

kṣa क्ष 𑌵 <क KA, 𑌵 VIRAMA, ष SSA>

jña ज्ञ 𑌵 <ज JA, 𑌵 VIRAMA, ण NYA>

Clusters involving the above consonants are always represented using atomic ligatures. They are not produced using the other methods shown below. However, as the encoding allows for alternate representations of conjuncts, irregular forms of these conjuncts are permitted.

Regular ligatures Conjuncts may be represented as ligatures in which the shapes of individual letters are visible.

ccha च्च 𑌵 <च CA, 𑌵 VIRAMA, च CHA>

tta त्त 𑌵 <त TA, 𑌵 VIRAMA, त TA>

tra त्र 𑌵 <त TA, 𑌵 VIRAMA, र RA>

dda द्द 𑌵 <द DA, 𑌵 VIRAMA, द DA>

ṣṭa ष्ट 𑌵 <ष SSA, 𑌵 VIRAMA, ट TTA>

Initial half-forms The initial letter in a cluster may be represented as a half-form if its graphical structure provides such an opportunity. Generally, if the letter has a right descender it is removed to produce a half form; the headstroke is typically retained, eg. त → 𑌶 for the half-form of TA. These are represented in encoded text as follows:

tka त्क <त TA, ् VIRAMA, क KA>

Conjoined forms Conjuncts may be represented by fusing the unaltered regular forms of letters together. In order to prevent ligature formation and to preserve the regular form of letters, the control character ZWJ is placed before VIRAMA for producing such forms. Conjoined forms are produced by joining letters together at the edges:

tpa त्प <त TA, ZWJ ZWJ, ् VIRAMA, प PA>

bda ब्द <ब BA, ZWJ ZWJ, ् VIRAMA, द DA>

stha स्थ <स SA, ZWJ ZWJ, ् VIRAMA, थ THA>

As the headstroke is not generally connected in Nandinagari, a conjoined conjunction may be produced by joining the headstroke between letters in a cluster:

tpa त्प <त TA, ZWJ ZWJ, ् VIRAMA, प PA>

bda ब्द <ब BA, ZWJ ZWJ, ् VIRAMA, द DA>

The headstroke is elongated for letters without a full-width headstroke so that the conjunction is seamless. This modification occurs with क KA, which has a half-width headstroke, when it is not in a cluster that is rendered using an atomic ligature.

kśa क्श <क KA, ZWJ ZWJ, ् VIRAMA, श SHA>

Conjoined forms can also be produced for clusters in which adjacent consonants may be treated as atomic ligatures. In such cases, the atomic ligature is produced first, then the following letter is fused with it. The headstrokes of these are also joined as necessary.

kṣma क्श्म <क KA, ् VIRAMA, ष SSA, ZWJ ZWJ, ् VIRAMA, म MA>

Some fused conjuncts may resemble those produced using an initial half-form, particularly when the second element is य YA.

Subjoined Some consonants are rendered as subjoined forms when they are non-initial in a cluster:

gla ग्ल <ग GA, ् VIRAMA, ल LA>

tva त्व <त TTA, ् VIRAMA, व VA>

This type of conjunct normally occurs when the initial consonant does not have a half-form and when the shape of the following consonant provides a feasible means for producing a subjoined form.

Special cases The following letters have special behaviors in conjuncts.

- TA The letter त TA can be rendered in different ways when it is initial in a cluster. The first is as a half-form, as shown above:

tka त्क <त TA, ॠ VIRAMA, क KA>

The other is by truncating the left stroke (त → ढ) to retain the letter as the base and to attach the following consonant as a subjoined form:

tna त्ना <त TA, ॠ VIRAMA, न NA>

tta त्ता <त TA, ॠ VIRAMA, ढ TA>

- YA The letter य YA is generally represented using the post-base form ळ. This form is produced by default using the sequence <C, ॠ VIRAMA, य YA>:

kya क्य <क KA, ॠ VIRAMA, य YA>

gya ग्य <ग GA, ॠ VIRAMA, य YA>

tya त्य <त TA, ॠ VIRAMA, य YA>

yya य्य <य YA, ॠ VIRAMA, य YA>

ṣya ष्य <ष SSA, ॠ VIRAMA, य YA>

When YA is non-initial it can also form conjuncts with a half-form of the initial letter. In such cases, the 𑄚𑄛 ZWJ is placed after VIRAMA to produce a half-form of the initial letter:

gya ग्य <ग GA, ॠ VIRAMA, 𑄚𑄛 ZWJ, य YA>

ṣya ष्य <ष SSA, ॠ VIRAMA, 𑄚𑄛 ZWJ, य YA>

The sequence <YA, YA> can be rendered in two ways. The default is to use the post-base form of the second letter:

yya य्य <य RA, ॠ VIRAMA, य YA>

The alternative is to use a conjoined ligature:

yya य्य <य RA, 𑄚𑄛 ZWJ, ॠ VIRAMA, य YA>

- RA When ढ RA is the initial consonant in a cluster it takes the form ॠ, which is called *repha*. This form is the default representation of the sequence <ढ RA, ॠ VIRAMA, C>:

rka र्क <ढ RA, ॠ VIRAMA, क KA>

rṣa र्ष <ढ RA, ॠ VIRAMA, ष SSA>

When it is non-initial it has the form -ॠ *ra-kara*. This form is the default representation of the sequence <C, ॠ VIRAMA, ढ RA>:

pra प <प PA, ॠ VIRAMA, र RA>

śra श <श SHA, ॠ VIRAMA, र RA>

- RA + YA When र RA is immediately followed by य YA in a cluster, it takes precedence over the latter. The conjunct RA is rendered as *repha*:

rya र्य <र RA, ॠ VIRAMA, य YA>

The post-base form of YA is not used with RA:

rya * री <र RA, ॠ VIRAMA, य YA>

Breaking conjunct formation As is the case in Devanagari and other Indic scripts, default conjunct formation may be modified using ꣳꣳ ZWNJ and ꣳꣳ ZWJ.

An atomic ligature may be rendered with visible VIRAMA or as a conjoined ligature:

kṣa क्ख <क KA, ॠ VIRAMA, ष SSA>

kṣa क्ख <क KA, ॠ VIRAMA, ꣳꣳ ZWNJ, ष SSA>

kṣa कक्ख <क KA, ꣳꣳ ZWJ, ॠ VIRAMA, ष SSA>

Rendering of *repha* may be prevented:

rka र्क <र RA, ॠ VIRAMA, क KA>

rka रक्क <र RA, ꣳꣳ ZWJ, ॠ VIRAMA, क KA>

The post-base form of YA may be produced after RA:

rya र्य <र RA, ॠ VIRAMA, य YA>

rya री <र RA, ॠ VIRAMA, ꣳꣳ ZWJ, य YA>

3.8 Various Signs

The following signs are used as vowel modifiers:

- ◌◌ NANDINAGARI SIGN ANUSVARA
- ◌ः NANDINAGARI SIGN VISARGA

The ◌◌ ANUSVARA is used for marking nasalization. It is generally placed to the right of a base letter, but may also be placed above it. The ◌ः VISARGA is used for representing post-vocalic aspiration in words of Sanskrit origin. They are used in encoded text as follows:

kaṃ क॑◌ <क॑ KA, ◌◌ ANUSVARA>

kaḥ क॑ः <क॑ KA, ◌ः VISARGA>

3.9 Avagraha

The following character is included in the repertoire:

₹ NANDINAGARI SIGN AVAGRAHA

This sign is used for marking the elision of word-initial *a* in Sanskrit as a result of sandhi (see figure 5).

3.10 Invocation signs

The following character is included in the repertoire:

ॐ NANDINAGARI SIGN SIDDHAM

The sign ॐ SIDDHAM is a symbol used as an invocation at the beginning of documents (see figure 3).

The syllable *oṃ* is used frequently. However, this is not an atomic character. It is represented using the sequence:

oṃ ॐ◌ <ॐ O, ◌◌ ANUSVARA>

3.11 Punctuation

Nandinagari uses | *daṇḍā* and || double *daṇḍā* for punctuation. These should be unified with the corresponding Devanagari characters. Script extensions have been specified in section 4.5.

3.12 Spacing headstroke

The following character is included in the repertoire:

— NANDINAGARI HEADSTROKE

The — HEADSTROKE is used as a sign of spacing or joining a word. It may be used for connecting a word that is broken on account of imperfections on a writing surface. It is also used as placeholder (see figure 6). A sequence of multiple headstrokes are generally unconnected:

— — — <— BHA, — HEADSTROKE, — HEADSTROKE, ञ JHA>

The HEADSTROKE may also occur between *daṇḍā*-s at the end of a section:

|| — — || <|| U+0965 DEVANAGARI DOUBLE DANDA, — HEADSTROKE, — HEADSTROKE,
|| U+0965 DEVANAGARI DOUBLE DANDA>

3.13 Digits

A full set of digits is used in Nandinagari:

○	NANDINAGARI DIGIT ZERO	॥	NANDINAGARI DIGIT FIVE
○	NANDINAGARI DIGIT ONE	॥	NANDINAGARI DIGIT SIX
ॐ	NANDINAGARI DIGIT TWO	॥	NANDINAGARI DIGIT SEVEN
ॐ	NANDINAGARI DIGIT THREE	ॐ	NANDINAGARI DIGIT EIGHT
ॐ	NANDINAGARI DIGIT FOUR	ॐ	NANDINAGARI DIGIT NINE

Nandinagari digits are similar to Kannada digits (see table 4). However, they are currently included in the proposed repertoire because they are used commonly in Nandinagari environments and are written in a style that matches the Nandinagari handwriting. If the differences between Nandinagari and Kannada forms are truly artificial, then it may be practical to unify these digits with the corresponding Kannada characters.

3.14 Number forms

Fraction signs occur used in Nandinagari sources (see figure 7; also L2/15-243: 22). These may be represented using characters already encoded in the ‘Common Indic Number Forms’ block (U+A830):

Corresponding character	
I ¼	I U+A830 NORTH INDIC FRACTION ONE QUARTER
II ½	II U+A831 NORTH INDIC FRACTION ONE HALF
III ¾	III U+A832 NORTH INDIC FRACTION THREE QUARTERS
¼	¼ U+A833 NORTH INDIC FRACTION ONE SIXTEENTH
½	½ U+A834 NORTH INDIC FRACTION ONE EIGHTH
¾	¾ U+A835 NORTH INDIC FRACTION THREE SIXTEENTHS

These characters are specified as script extensions for Nandinagari. The ‘Common Indic Number Forms’ are described briefly in *The Unicode Standard* (chapter 22.3 ‘Numerals’, pp. 770–771) and in more detail in the original encoding proposal (L2/07-354).

3.15 Vedic signs

Signs for Vedic notation are found in Nandinagari manuscripts (see L2/15-101: 7–9). They are not included in the proposed repertoire. The following marks for intonation are attested (the given values are tentative):

○	<i>svarita</i>
○	<i>anudatta</i>
○	<i>udatta</i>

Usage of these signs is shown in figures 12 and 13. Additional research is required to determine if these signs should be encoded as specific to Nandinagari or in the generic Vedic Extensions block (1CD0..1CFF).

Other signs, such as ॠ *jihvāmūlīya* (see figures 8, 9) and ॡ Vedic *anusvāra* (see figure 10), are attested but these may be unified with existing characters in Vedic Extensions:

	Corresponding character
ॠ <i>jihvāmūlīya</i>	U+1CF2 VEDIC SIGN ARDHAIVISARGA
ॡ <i>upadhmānīya</i>	U+1CF2 VEDIC SIGN ARDHAIVISARGA
ॢ <i>anusvāra</i>	U+1CE9 VEDIC SIGN ANUSVARA ANTARGOMUKHA

A doubled form of ॢ Vedic *anusvāra* / *anunāsika* is attested in Nandinagari manuscripts (see figure 11):

ॣ Vedic double *anusvāra*

This character is not yet encoded in Unicode, but should be considered for inclusion. If encoded, it may be allocated to the Vedic Extensions block if there is space.

3.16 Collation

The sort order for Nandinagari is as follows:

अ A < आ AA < इ I < ई II < उ U < ऊ UU < ञ VOCALIC R < ञ् VOCALIC RR <
 ए E < ऐ AI < ओ O < औ AU < क KA < ख KHA < ग GA < घ GHA < ङ NGA <
 च CA < छ CHA < ज JA < ङ NYA < ट TTA < ठ TTHA < ड DDA < ढ DDHA <
 ण NNA < त TA < थ THA < द DA < ध DHA < न NA < प PA < फ PHA < ब BA <
 भ BHA < म MA < य YA < र RA < ल LA < व VA < श SHA < ष SSA < स SA <
 ह HA < ल् LLA < र् RRA < ि VOWEL SIGN I < िी VOWEL SIGN II < उ VOWEL SIGN U <
 उ VOWEL SIGN UU < ्र VOCALIC SIGN R < ्र् VOCALIC SIGN RR <
 े VOWEL SIGN E < ै VOWEL SIGN AI < ो VOWEL SIGN O < ौ VOWEL SIGN AU <
 ् VIRAMA

The letter र् RRA does not have a position in the traditional order. For this reason it is sorted after the last consonant ल् LLA.

4 Character Data

4.1 Character Properties

6 Acknowledgments

I am very grateful to Srinidhi A. of Tumkur, Karnataka for discussions on Nandinagari, for sharing materials on the script, and for reviewing earlier drafts of this proposal. I would also like to thank Shriramana Sharma for comments on the preliminary proposal. Jean-Luc Chevillard (Centre national de la recherche scientifique (CNRS), Paris) assisted with locating experts of the script and manuscript sources. Several of the manuscript folios shown here are from the digitized collections of the French Institute of Pondicherry (IFP).

This project was made possible in part through a Google Research Award, granted to Deborah Anderson for the Script Encoding Initiative, and a grant from the United States National Endowment for the Humanities (PR-50205-15), which funds the Universal Scripts Project (part of the Script Encoding Initiative at the University of California, Berkeley). Any views, findings, conclusions or recommendations expressed in this publication do not necessarily reflect those of Google or the National Endowment for the Humanities.

CHAPTER II

ALPHABETS AND NUMERALS

Nandināgarī has twelve vowel letters and thirty five consonant letters. The number excludes 'a' with anusvāra and 'a' with visarga. In the inventory of Nandināgarī alphabets 'kṣa' and 'jña' are treated as single letters. In the case of the letter for 'kṣa' it does not show any apparent resemblance with the letters of ka and ṣa. However, in the case of 'jña' it has some resemblance with the letter ja. The letter for 'ba' is very often used to represent 'va' and the letter for 'sa' is commonly used to represent 'śa'. Since a few instances are noticed where sa-śa and ba - va are distinguished by separate letters, all the four are included in the inventory of letters.

VOWELS

There exists only four basic vowel letters. The other letters representing vowels are only derivations. These four primary vowel letters are those which represent a, i, u and e. The long vowels ā, ī, and ū are derived by the use of subsidiary symbols. The vowels ṛ and ḷ are derived from the consonant letters 'ra' and 'la'. The letters for long vowels ṛ and ḷ are absent. The diphthong 'ai' is formed by the use of subsidiary symbol with the letter for the vowel 'e', the letters for 'o' and 'au' are formed by adding subsidiary symbols to the letter 'ā'. The vowels of Nandināgarī script are given below.

NANDINĀGARĪ	ROMAN	DEVANĀGARĪ
अ	A	अ
आ	Ā	आ
इ	I	इ

NANDINĀGARĪ	ROMAN	DEVANĀGARĪ
ओ	O	ओ
औ	AU	औ

CONSONANTS

The basic consonant letters of Nandināgarī, similar to that of other Indian scripts, indicate the consonant + the vowel 'a'. As in Devanāgarī, letters are found for all the varga consonants. When a pure consonant i.e. without any vowel is to be represented, a separate subsidiary symbol which is identical with the symbol in the Devanāgarī script is found to be in use. Eg. (k), (c), (t). The consonant letters are as follows:

NANDINĀGARĪ	ROMAN	DEVANĀGARĪ
क	KA	क
ख	KHA	ख
ग	GA	ग

NANDINĀGARĪ	ROMAN	DEVANĀGARĪ
ई	Ī	ई
उ	U	उ

NUSVĀRA AND VISARGA

Anusvāra o

Visarga :

Figure 28: Charts showing basic characters of Nandinagari (from Visalakshy 2003: 24–27).

]. For the combination of the vowel 'i' with consonants, instead of a separate subsidiary symbol the letter for 'i' itself is used.

Subsidiary Symbols of Vowels:

SUBSIDIARY SYMBOL (NANDINĀGARĪ)	VOWEL REPRESENTED	DEVANĀGARĪ
𑂗	Ā	आ
𑂘	I	इ
𑂙	Ī	ई
𑂚	U	उ
𑂛	Ū	ऊ
𑂜	Ṛ	ऋ

SUBSIDIARY SYMBOL (NANDINĀGARĪ)	VOWEL REPRESENTED	DEVANĀGARĪ
𑂝	E	ए
𑂞	AI	ऐ
𑂟	O	ओ
𑂠	AU	औ

Letters Representing Consonant Vowel Combinations

Though 'r' does not occur with all consonants, its combination with consonants is not very much restricted and also has a regular pattern. Hence all C+r combinations are given. Only very few examples are found for the occurrence of consonant +vowel 'l'.

NANDINĀGARĪ	ROMAN	DEVANĀGARĪ
𑂡	KA	क

NANDINĀGARĪ	ROMAN	DEVANĀGARĪ
𑂢	KĀ	का
𑂣	KI	कि
𑂤	KĪ	की
𑂥	KU	कु
𑂦	KŪ	कू
𑂧	KṚ	कृ
𑂨	Kḷ	क्लृ

NANDINĀGARĪ	ROMAN	DEVANĀGARĪ
𑂩	KE	के
𑂪	KAI	कै
𑂫	KO	को
𑂬	KAU	कौ
𑂭	KHA	ख
𑂮	KHĀ	खा
𑂯	KHI	खि

Figure 29: Dependent vowel signs in Nandinagari (from Visalakshy 2003: 30–33).

NUMERALS

In order to represent numerals, Nandināgarī uses ten symbols. They are as follows:

NANDINĀGARĪ	ROMAN	NANDINĀGARĪ	ROMAN
०	0	𑌵	5
𑌶	1	𑌷	6
𑌸	2	𑌹	7
𑌺	3	𑌻	8
𑌼	4	𑌽	9

The combination of these symbols derive higher numerals. The patterns of combinations are same as in Devanāgarī. The following are some examples:

NANDINĀGARĪ	ROMAN	NANDINĀGARĪ	ROMAN
𑌶०	10	𑌶𑌵𑌵𑌵	1000
𑌶𑌶	11	𑌷𑌷𑌺𑌵	2235

Figure 30: Nandinagari digits (from Visalakshy 2003: 86).

CHAPTER VII
VARIANTS

Some variant letters/symbols noticed in Nandināgarī are given here. Some of the variants may be due to the interference of other writing systems such as Devanāgarī.

CONSONANT VOWEL COMBINATIONS

As already pointed out, the basic consonant letter represents the combination of consonant and the vowel 'a'. All the other vowel combinations with the consonants are represented by using subsidiary symbols with the basic consonant letter except in the case of
