

Date: 2019 Oct 4 (revised Oct 7)

To: UTC & CLDR

From: Apple Localization Engineering, transmitted/edited by Peter Edberg

Subj: Comments on proposed kMandarin changes per 3 UTC actions & documents

This document consolidates proposed changes to the Unihan kMandarin field per the following UTC actions (with associated CLDR bugs and UTC documents), and provides comments on the proposed changes from Apple Localization Engineering (this Oct 7 revision also includes updates in response to [L2/19-361](#)):

UTC action	CLDR bug	UTC document	UTC document link
151-A36a	CLDR-10251	L2/17-109	https://www.unicode.org/L2/L2017/17109-unihan-db-corr.pdf
			Some of the changes in the above were also proposed by Persson in the following:
		L2/15-036R3	https://www.unicode.org/L2/L2015/15036r3-unified-readings.pdf
155-A40a	CLDR-11101	L2/18-117	https://www.unicode.org/review/pri361/feedback.html , see Mar 13 item
159-A47	CLDR-13144	L2/19-161	https://www.unicode.org/L2/L2019/19161-kmandarin-148.pdf

The Unihan kMandarin field is described in UAX #38 as follows:

- “The most customary pinyin reading for this character. When there are two values, then the first is preferred for zh-Hans (CN) and the second is preferred for zh-Hant (TW). When there is only one value, it is appropriate for both.”
- “This field is targeted specifically for use by CLDR collation and transliteration. As such, it is subject to considerations that help keep pinyin-based Han collation (and its tailorings) and transliteration reasonably stable. The values may not in all cases track the preferred use in some dictionaries.”

Additionally, the kMandarin field should match the expectations of users of CLDR/ICU Chinese collations and transliteration; in many cases this means matching the readings in dictionaries that such users are most likely to consult.

The Apple Localization Engineering team consulted the following online dictionaries for the feedback here:

- <http://chardb.iis.sinica.edu.tw>
- <https://ctext.org/dictionary.pl?if=gb>
- <https://zidian.911cha.com>
- <https://www.cns11643.gov.tw> (for some Oct 7 updates)

The attached spreadsheet consolidates input from the proposals listed at the top, and provides comments from Apple Localization Engineering. Suggested resolutions based on Apple comments:

- **AGREE** (172): **use proposed value**.
- **COMBINE** (3): **use suggested value** that combines proposed value (for CN) with current or other value (for TW).
- **BOTH** (27): current and proposed are both valid; **keep current** for stability.
- **MULTIPLE** including proposed (16): proposed and another value are both valid; **use proposed**.
- **MULTIPLE** including current (10): proposal removes reading, but current and another value are both valid; **keep current**.
- **MULTIPLE**, comment omits proposed or changes current (4): needs further study, **keep current** for now.
- **DISAGREE** (4): needs further study, **keep current** for now.

2019 Oct 7 rev: Proposed kMandarin changes per 3 UTC actions & documents, with comments from Apple Loc. Eng.

character	code	kMandarin current; if two values, first is for CN/Hans, second for TW/Hant	kMandarin in proposal	proposal	Apple Loc. Eng. comments: AGREE with proposal; COMBINE proposed with current or other as CN/TW entries; BOTH —found references for both current & proposed, not a CN/TW difference; MULTIPLE—references suggest other multiple readings; DISAGREE with proposal.	corresponding traditional character (same readings apply)	corresponding traditional character code	corresponding traditional character kMandarin current
