2021 Report of the ISO 15924 Registration Authority

Markus Scherer, 2021-mar-16

The Unicode Consortium has continued to function as Registration Authority for ISO 15924 "Codes for the representation of names of scripts". In 2019, Markus Scherer was appointed Registrar by the Registration Authority.

The ISO 15924 Web site https://www.unicode.org/iso15924/ has been updated regularly. The tables of code elements remain freely available from that site.

In 2019, 2020, and 2021 so far, eleven script codes have been registered and published. A dated list of changes is available at https://www.unicode.org/iso15924/codechanges.html.

All voting members of the Joint Advisory Committee (https://www.unicode.org/iso15924/iso15924jac.html) have been active within the last year.

The RA does not charge fees for adding codes. We have had no complaints since the last report.

ISO 15924 script codes continue to be widely used in the industry as part of language tagging systems and repositories and libraries providing locale data.
