Title: Project Sub-Division Proposal on Scheme of Ideograph Description Sequence

Reference: In response to SC2/WG2 resolution M33.29, SC2/WG2/IRG submit the following project sub-division proposal to SC2 and SC2/WG2.

Scope:

To provide the definition of Ideograph Description Sequences which includes

- Ideographic Structure Characters
- Ideographic Component Supplement for BMP of ISO/IEC 10646
- Valid expressions of Ideograph Description Sequences

Rationale:

Due to the fact the complete repertoire of ideographic characters are not yet known, it is inevitable to encounter un-encoded ideographic characters even after Plane 2 is completely defined. The proposed scheme is used to represent the un-encoded ideographs using coded characters.

Supporting documents:

Definition of Ideographic Structure Characters(IRG N523, and IRG N409A),
Ideograph Description Sequences(IRG N524)

IRG Deliverables:

IRG will provide the draft pDAM explaining the following

1. The summary form of Ideographic Structure Characters
2. The definition of Ideograph Description Sequences
3. The Component Supplement

Project Schedule:

Draft pDAM will be available by late 1998.
