

ISO/IEC JTC 1/SC2/WG2 IRG Ideographic Rapporteur Group

Source/Contributor Identifier: The Unicode Consortium
Meeting: IRG #18 (Tokyo)
Title: Initial UTC Submission for Extension C
Keywords: (none)
Status: For incorporation into IRG Extension C work
Short description: An initial set of ideographs to include in Extension C work
Proposed Conclusion/Requested Action:
Clearly differentiate the U-source from ISO/IEC 10646 codepoint;
include the attached ideographs in Extension C work
Arguments/Text of Contribution:
Follows

The Unicode Technical Committee at its 89th meeting, held in Mountain View, California in November 2001, approved the submission of a set of ideographs derived from western sinological materials and other sources from the UTC to the IRG for inclusion in Extension C work. An initial set of ideographs for submission is appended. Characters in this submission should be referred to as UTC-dddd, where "dddd" is a four-digit index.

There is currently a set of twelve ideographs which derive from Unicode and no other IRG source, namely U+FA0E, U+FA0F, U+FA11, U+FA13, U+FA14, U+FA1F, U+FA21, U+FA23, U+FA24, U+FA27, U+FA28, and U+FA29.

The IRG's SuperCJK database currently uses the "U-source" to refer both to these twelve ideographs *and* to the code point assigned ideographs from the IRG by WG2 in ISO/IEC 10646. The use of the single field for both purposes has concerned the UTC in the past and we have requested that the IRG change this practice. Now that we will be actively submitting characters to the IRG, it becomes imperative that this separation be maintained. Moreover, as we will discuss in IRG N 850, there is no guarantee that WG2 and the Unicode Consortium will assign a single, unique code point to every ideograph catalogued by the IRG in the future.

As we have not submitted ideographs for inclusion in either Extension A, and B, we will require information on the IRG on what data needs to be provided for a submission.
