

ISO/IEC JTC 1/SC 2/WG 2/
Ideographic Rapporteur Group

Source / Contribution Identifier: Japan

Meeting: IRG#35 @ Macao SAR, China

Title: GKX source issues

Keywords: (none)

Status:

Short Description:

Proposed Conclusion / Requested Action: None

Japan found several GKX-characters were not identical to the shapes appeared in KangXi dictionary. Japan reported this issue as a review result of Group 3, and commented to the CD ballot of 10646 3ed. At the last WG2 meeting, this comment is discussed and disposed as:

A note will be added in sub-clause 23.1 after the enumeration of the G source references with the following text:

Note 3 – The graphic symbol shown on the code charts for a character referenced by a Kangxi Dictionary (GKX) are in modern Chinese style which may differ slightly from the corresponding graphic symbol used in the dictionary.

This is acceptable for Japan as the reason why GKX source characters are not always identical to the shape in the dictionary.

However, the issue is not so simple.

As below the issues are categorized

Compare new glyphs to the shapes in the dictionary Compare the new glyphs to the shapes in the current standard	Identical with KangXi dictionary shape	Different from KangXi dictionary shape
Same/Unifiable change from the current standard	① No problem	② WG2 resolved to add note to the definition of the source This type of characters are categorized in "Japan comment-(2) GKX source issues". Need to check if they are unifiable change. In case of non-unifiable, move to ④
Non-unifiable with the current standard	③ What to do ?	④ Font production error. Glyphs of this category should be correct back to the current shape.

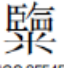

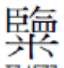

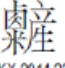

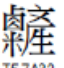

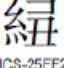

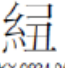

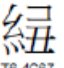

[Discussion]

For the case of ③, it is considered that glyphs in the current standard might be wrong. However, if we keep new glyphs, this is incompatible change on the standard. We need to make some notes or corrigendum to explain those incompatible changes clearly. On the other hand, if we change back glyphs to the current shapes, the source information might be wrong and China may request to add the correct KangXi characters.

CJK extension B is published about 10 years ago and widely implemented for use. They are not used only in China. Japan is afraid that this kind of incompatible change might effects to the users. So IRG should be careful how to process these changes. Before starting editorial meeting, IRG should discuss how to correct the chart.

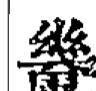

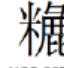

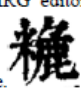

Here is samples (not exhaustive) from the consolidated comments:

sample of case ②

Code	Glyph in UCS 2003	Glyph in CD	Comment type	Comment	Note
25F42		25F42 米 119.13   GKX-0913.32 T5-6675	GKX	G	
25F4F		25F4F 米 119.14   GKX-0913.36 T7-4E77	GKX	G	
25F7d		25F7D 米 119.20   GKX-0914.22 T5-7A32	GKX	G
