Title:	Old Hanzi Related Discussions
Status:	To be endorsed by IRG Meeting No. 37
Actions required:	IRG Members and Old Hanzi Experts
Distribution:	Electronic
Medium:	

The CJK Editorial group has discussed a number of issues related to the Old Hanzi Expert Group work. The following is a summary of the discussion.

- 1. The group has reviewed the proposed Old Hanzi Principles and References (IRGN 1747, Feedback by Prof. Kim) and has made the suggested editorial changes (see IRGN 1823). In addition to the suggested editorial changes, the IRG would like for the Old Hanzi Group to consider further clarification on the following items:
 - 1.a. Vigorously review its reference list as sources and consider gradual development of indexing methods to sources of this reference list.
 - 1.b. Further clarify how indexing will be done in Section 6.1.3 for the Old Hanzi glyphs which do not have corresponding SW and UCS characters.
 - 1.c. Consider revision of Section 3.5.2. The IRG understands the purpose of restricting the reference to UCS to BMP. However, The current description may be too restrictive. There may be cases that the only corresponding modern characters are outside of the BMP.
 - 1.d.Complete the definitions of all the entries required of the submission. Eg. "definition of source, Period/Epoch, etc.." are not listed in Section 2.
- 2. Review of Old Hanzi Coding Framework (IRGN 1771 and ROK feedback) The Japanese delegate presented the proposed coding framework. Members had questions on how the representative glyphs are selected for encoding purposes. It

IRGN1810 1 IRG#37 Agenda

was understood that the selection is based on a method discussed in two books Yinxu Jiagu Keci Leizuan (殷墟甲骨刻辭類纂, 姚孝遂主編, 中華書局, ISBN 9787101004779, 1989) and Jiaguwen Zidian (甲骨文字典, 徐中舒主編, 四川辞書出版社, ISBN 9787806822326, 2006). Although IRGN1771 was distributed in IRGN Meeting 36, there is no feedback from Old Hanzi Group. Members also had concerns over the naming of the characters, which is meaning-based. The IRG reiterated that since the purpose for the development of the Oracle Bone scripts is to have it coded, the Old Hanzi Group must at some point in time propose how you want the Oracle Bone scripts to be coded. Without having explicit requirement from the Old Hanzi Group, the discussion on a specific coding model may be premature.

Based on this document and the discussion, the IRG would like for the Old Hanzi Group to take the following actions:

2.a Review of IRGN 1771

- 2.b. Come up with a preliminary coding requirement specification. The specification does not need to be very technical. But it should spell out how the Old Hanzi group wants the collection of glyphs to be used. This can help experts, IRG, and WG2 to identify and develop an appropriate coding framework.
 - 3. With regards to font production document by TCA(IRGN1786) and feedback/response from ROK and Japan, the IRG requests that the Old Hanzi Expert Group review the documents.

assigned by submitters. Example: T0001 is one IRG global unique ID assigned to an Oracle Bone inscription submitted by TCA. Deleted: Script/ 2.2. Imitated Glyph: The truthful trace from 'Original Shape/Glyph' [摹寫字的定義:忠實摹寫原形的字形。] 2.3. Original glyph: The glyph selected according to the principles of Oracle Bone selection (in the item 4) in this document. [原形的定義:根據選字原則(本文件第4章) 从原拓選定的字形。] Deleted: picture 2.4. SW Radical: The glyph image of the corresponding ShuoWen Radical in Kai-style. The submitter is not required to provide the Deleted: picture glyph image, it will be produced by the project editor based on the Deleted: is assigned submitted SW Radical number. 2.5. SW Radical number: 1 – 540. The order is defined by 漢·許慎'説 文解字'(大徐本). 3. Rules Deleted: Script/ 3.1. The 'Imitated Glyph' image should be of standardized dimensions Deleted: size and given in 3.2. Deleted: Script/ 3.2. The 'Imitated Glyph' image shall be in EPS format (resolution 1024×1024). Formatted: Tab stops: 3.54", Left 3.3. The format of bitmap images for imitated glyphs, original shapes and 540 SW Radicals are specified as follows: 128x128, Black and white bitmap

3.4. The last three columns are optional fields and they are indicated

Deleted: '

Deleted: '

with an asterisk "*". All other fields are mandatory.

Deleted: ,

Deleted: the

- 3.5. The field "Corresp. Modern Char. (UCS Code)" shows the modern character similar in meaning or shape.
- 3.5.1. The field "Corresp. Modern Char. (UCS Code)" is filled by <u>a</u> single codepoint or a list of CJK Unified Ideographs separated by semicolon (;).
- 3.5.2. Only URO (CJK Unified Ideographs in BMP without Extension A and CJK Compatibility Ideograph) characters can be used for the convenience of sorting or finding a character from the database. If there is no corresponding modern character, or exists but not coded in URO, the field must be blank. The note field should be used for the description for such cases.
- 3.6. If the field "Corresp. Modern Char.(UCS Code)" is blank, then the "Notes" field must be filled with justifications to indicate the glyph is well-understood in meaning, for example, the meaning of the 'Imitated Glyph'. Also "Note" field can include the description of the glyph structure when the glyphic components have the corresponding modern character in UCS.

3.7. Source: The "Source" field is <u>an important key to exclude exactly duplicated data.</u>

The "Source" field consists of two <u>mandatory</u> elements <u>and</u> one optional element. They will be concatenated with <u>the</u> hyphen character '-'.

(mandatory) The 1st <u>element is a letter indicating referenced</u>
 <u>book</u>. The possible values are:

- (mandatory) The 2nd element is an Oracle Bone number (甲骨 拓片的編號) which consists of 5 digits assigned uniquely to each Oracle Bone inscription.
- (optional) The 3rd element indicates I the side of the Oracle Bone which consists of 1 digit. The possible values are '0' for front side, '1' for back side. If an inscription is carved only on one side, this element will be omitted.

Three examples of the "Source" field are listed below.

- A-00001 (does not have front and back side)
- A-00001-0 (front side)
- A-00001-1 (back side)
- 4. The principles of Oracle Bone selection

4.1. Separation principles

Two or more instances of Oracle Bone characters with the following differences will be separated.

4.1.1. One or more components are different.

4.1.2. The number of components or lines is different.

Formatted: Superscript

Deleted: (mandatory) Oracle Bone number (甲骨拓片的編號) which consists of 5 digits assigned uniquely to each Oracle Bone.¶

Deleted: dentifier to determine

Formatted: Superscript

Deleted: Distinction

Formatted: Font color: Auto

Formatted: Font: (Default) Times New Roman

Formatted: Font: (Default) Times New Roman

Formatted: Font: (Default) Times New Roman

Formatted: Left, Right: 0", Don't adjust right indent when grid is defined, Space Before: 0 pt, After: 0 pt, Line spacing: single, No bullets or numbering, Don't adjust space between Latin and Asian text, Don't adjust space between Asian text and numbers

Formatted: Font: (Asian) MS-Gothic, 12 pt, Not Bold

Deleted: types of

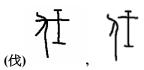

4.1.3. The direction (e.g. mirror image) of a component is different.

4.1.4. The position of one or more components is different.

4.1.5. Connectivity of the components is different.

4.2. Unification principles

Two or more instances of Oracle Bone <u>inscriptions</u> with the following differences will be unified unless there's any difference in the meaning:

4.2.1. The length of corresponding line is different.

4.2.2. The thickness of corresponding line is different.

Deleted: Whether the same set of components are connected each other or not...

E I, I, E

4.2.3. The size of the corresponding components different.

Deleted: each component of the same set is

4.2.4. The enclosed part is filled or not filled.

5. The principles of radical classification

5.1. If an Oracle Bone glyph corresponds to a Shuowen glyph, it should be classified into Shuowen radical of the corresponding Shuowen

glyph. For example, (corresponds to) should be classified to '明', not to '月' or '日'. In addition, Shuowen classifies some Guwen (古文) or Zhouwen (籀文) glyphs to a radical class even when these glyphs do not include Shuowen radical as their glyphic components. If the corresponding Shuowen glyph is such, the Oracle Bone glyph should be classified to the radical that the

Deleted: is

Deleted: ing

Deleted: ed

Deleted: ed

Deleted: ed

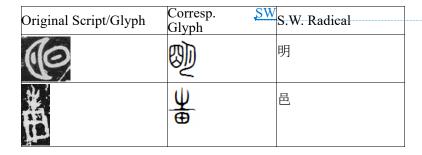

corresponding Shuowen glyph is included. For example,

Deleted: ed

Deleted: ed

(corresponds to **鱼**) is classified to '邑', not to '土' or '田'.

Deleted: S.W.

5.2. The glyph should be classified into Shuowen radicals according to the Original Oracle Bone Inscriptions, e.g. "It" should be classified under radical ff, because Shuowen radicals do not include the most significant glyphic component '單'. The next significant glyph component '斤' is used (KangxiZidian classifies '單' to the radical '口'. The classification of Oracle Bone shape "靳" to '口' is more difficult to use than that to '斤').

Deleted: es

歸部問題:以甲骨文字形為主,如"靳"入斤部。

Example 2

Imitation Script/Glyph	Original Script/Glyph	SW Radical
Y	4	斤

Deleted: S.W.

5.3. Suppose that the shapes of the Original Oracle Bone inscriptions are different, but they share the same meaning and usage. Eventually, they have evolved into a pair of variants with two different radicals in Shuowen. According to the radical classification in Shuowen, the Oracle Bone glyphs are put under different radicals. e.g. 兀 and 元. 甲骨文異形同用,後世分為兩字,說文分見兩部,則依《說文解字》收入不同部首。如"元"、"兀"。

Deleted: T

Deleted:,

Example 3

Imitation Script/Glyph	Original Script/Glyph	SW Radical
ラ		
J	Į.	JL

Deleted: S.W.

5.4. Suppose that the shape, meaning and usage of the Original Oracle Bone inscriptions are identical but new components have been added over time. If a radical can be found in Shuowen, the glyph will be put under the corresponding radical according to the Original Oracle Bone inscriptions. e.g. 录 put under the 录 radical and similarly 畐 in 畐 radical.

甲骨文同形同用,後世增添偏旁,《說文解字》另有部首者,則

Deleted: T

依甲骨文原形歸入相應部首。如 "畐" 入《說文解字》畐部, "彔" 入《說文解字》彔部。

Example 4

Imitation Script/Glyph	Original Script/Glyph	SW Radical
臣	I	田
; \$\frac{1}{2};	₹.	家

5.5. Suppose that the shapes of the Original Oracle Bone inscriptions are the same but they have many meanings and usages. Eventually, they have evolved into different characters. The glyph of these characters will be determined according to the shapes of the Original Oracle Bone inscriptions, and put under the corresponding radical in Shuowen. e.g. 史史事.

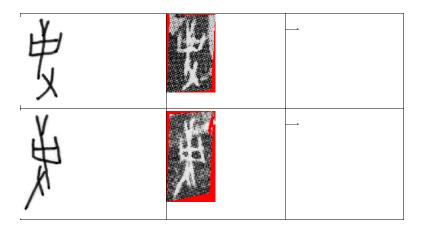

甲骨文同形多用,後世分為多字,依甲骨文字形分別隸定,歸入 《說文解字》相應同一個部首。如:"史"、"吏"、"事"。

Example 5

			_	
Imitation Script/Glyph	Original Script/Glyph	SW Radical		 Deleted: S.W.

Deleted: T

Deleted: S.W.

6. The principles of sorting the order of the glyphs of the same Oracle Bone Inscription

同字之字形排序原則

6.1. Ordering of <u>Inscriptions</u>

The Oracle Bone glyphs are classified into 3 groups; 1) SW-mappable glyphs, 2) SW-unmappable but with corresponded UCS character, and 3) SW-unmappable and without corresponded UCS character. They are ordered as follows:

- 6.1.1. SW-mappable glyphs: The Oracle Bone glyphs that corresponds to ShuoWen glyphs are identified are ordered by the order of ShuoWen Jiezi Daxu version (大徐本).
- 6.1.2. SW-unmappable glyphs with corresponding UCS character: The Oracle Bone glyphs without corresponding SW glyph but have corresponding UCS character is available should be placed after SW-mappable glyphs. To gather similar glyphs, the glyphs sharing same corresponded UCS characters should be collected to one group.

Deleted: Glyph Categories

Deleted: ing

Deleted: ed

Deleted: ed

Deleted: that corresponded

Deleted: is unavailable

Deleted: ed

6.1.3. SW-unmappable glyphs without corresponding UCS character: The Oracle Bone glyphs which have no corresponding SW glyphs and no UCS character should be placed after SW-unmappable glyphs with corresponding UCS character.

Deleted: ed

Deleted: that

Deleted: ed

Deleted: ed

6.2. Ordering in Glyph Category

6.2.1. If one or more types of components or radical are different, those with smaller difference will be placed first, and those with greater difference behind.

異構字依字形差異大小排序,差異較小者置於前,差異較大者 置於後。

6.2.2. Glyph variants will be placed after the typical glyph.

異寫字置於主形之後。

7. Release Process of the Database

For the record of the discussion of inclusion, deletion (because of unclear, cropped or exactly duplicated data), unification (glyphs from different sources(see 3.7) but cannot be separated by the separation principles), or pending should be recorded in 'Status' column of the database.

8. Data Format For Oracle Bone Data Exchange

For the data exchange and review work, members are going to use the data format specified as follows:

■ Images format:

- 8.1. use PNG storage format.
- 8.2. The original glyph should be scanned at 300 dpi (dots per inch).

Deleted: then

Deleted: submitted

Deleted: distinguished

- 8.3. The <u>imitated</u> glyph images are named [ID]+[_R] (for example, if the ID is T00001, the transcribed glyph images should be named T00001_R).
- 8.4. The original glyphs are named [ID]+[_O] (for example, if the ID is T00001, the original glyph should be named T00001 O).
- 8.5. Glyph determination images(Note: Not defined!) are named [ID]+[D] (for example, if the ID is T00001, the glyph determination image should be named T00001 D).
- 8.6. The images of unifiable shapes are named [ID]+[ID of the unified glyph ID] (for example, if the Oracle Bone ID is T00001 and the unifiable shape ID is 000, the image of unifiable shape should be named T00001 000).
