This document reports a preliminary IDS checking result of possibly unifiable ideographs (non-cognate ideographs proposed from Japan are not included.)

Checking this list in early stage of Extension-F standardization may largely reduce the burden of human checking.

Ideograph pairs in this list share unifiable components that are appeared in the UCV list, or their differences may be categorized to one of Annex S unification criteria (such as minor stroke omission/addition, etc.).

For unifiable component patterns that may be generalized, new UCV patterns are also proposed. Among new UCV proposals, followings have existing examples in encoded ideographs.

G Z3952201 is pronounced “nyi” meaning hearing. (古壮字字典)

取(U+26539) is pronounced “nai” meaning bad eye. (漢語大字典) (Note: this is not a simplified ideograph.)

G_Z3952201 "𪛗耳义" pronunciation shows origin is simplified 𪛗耳義 and so not cognate with U+26539 取 𪛗耳叉. Thus, they are un-unifiable.

4.

XG_ZFY00792 𪛗 | G_Z3952205 𪛗

G_Z3952205 𪛗口义 (the right one in CJK_F), the pronunciation is "nyi" which shows that the 义 is simplified 義 so it is the simplified form of U+20FFF 𪛗 and therefore not cognate with 𪛗口叉 (the left one which is already in CJK_E.)

5.

G_Z3742201 𪛗 | 6748 𪛗 𪛗 𪛗 𪛗 𪛗 | #127 𪛗 𪛗

Both “木义” and “木叉” are found in the *Ancient Zhuang Character Dictionary* 《古壮字字典》, on page 580 and page 368 respectively. It is strongly proposed to be encoded separately.

The unification of “口閒” vs “口間” might be a mistake. “閒” and “間” has different meanings and pronunciations.

- “間”, pronunciation “jian” (in mandarin 漢語普通話), with simplified form of “间”. “口間”, pronunciation [kjan], comes from “kan”, the ancient pronunciation of “間”.
- “閒”, pronunciation “xian”, a variant of “閑”, with simplified form of “闲”. “口閒”, pronunciation “yan”, apparently comes from “閒”.

Thus, they are not cognate and un-unifiable.

Meeting: IRG #39

IRGN1899 pointed out preliminary possibilities of unification of the characters proposed in IRGN1883 by use of mechanical correspondence with the Summary of UCS Ideograph Unifiable Component Variations. Based on characters counted in IRGN1899, IRGN 1911 suggested that IRGN1883 includes that an excess of 5% of the data should be subject to discussion. Although we had already checked the proposed characters using the Summary file, we would like to drop several characters indicated in IRG N1899. As we believe the rest characters are appropriate for encoding in UCS, we would like to request discussion on the remainder of the 73 characters (2.18 percent of all proposed characters) as well as the full set of characters that we have proposed at the IRG.

The source references of characters to be dropped are below:
