1. Two GB character sets are being revised

China is revising two most important character sets:

- GB 13000, will be identical to ISO/IEC 10646: 2014.
- GB 18030 Information Technology — Chinese Coded Character Set, will contain all CJK Unified Ideographs and China-related characters.

We welcome interested parties including foreign enterprises to contribute in these jobs.

2. Achievements of the Project “Chinese Characters Repertoire”

The Project “Chinese Characters Repertoire” (中華字庫) made progress in Hanzi characters. It is estimated that 3,000 place name or human name characters will be collected by 2016, these characters and those found in ancient books will be compared to encoded ones in UCS.

End.
