### PART 1 transcription

The same character of Old Hanzi may own several transcriptions(隸定形) for some reasons:

**First**, different scholars should transcribe(隸定) different transcriptions.

**Second**, some transcription is considered right at a certain period but wrong at the later period.

**Third**, strict transcribing or not will bring different transcriptions.

We need not code all transcriptions. So submitting a transcription should be a very cautions working. The following principles of coding a transcription should be followed:

1. The transcription which is correct should be coded. (The transcription which is obviously wrong should not be coded.)
2. The transcription which is wrong but used quite frequently should be coded.
3. The transcription which is wrong and seldom-used should not be coded.
4. The transcription according with the modern habit of writing should be coded.

**For example:**

1. The transcription which is correct should be coded. (The transcription which is obviously wrong should not be coded.)

Obviously,  can not be the transcription of .  should not be coded.

2. The transcription which is wrong but used quite frequently should be coded.

(16) 父乙弗𠄎? 𠄎 一 二

 is the transcription of .  is 止(toe).  was regarded as 它(它→蛇 snake) but now we know that  is 虫(worm). So the correct transcription is 虫 or U+27258𧈧. 𠄎 is the variant of 止 when it is at the upper part of a character, just like U+97CB 𠄎 . More importantly, now we know that  is the earliest written of U+821D 𠄎 so that using 𠄎 but not 止 can describe better the relationship between  and U+821D 𠄎.

But since 1930s,  has been used in a lot of publications. So it is necessary to code .

**穢** is a wrong character in the evidence. We provide three evidences to prove that the correct one is **黎**.

This problem is a common typesetting error. For example:

殷墟甲骨文“彗”字補說  
 袁錫圭  
 蔡文指出古書中有當疾穢講的“彗”字，如《方言·三》：  
 差、閒、知、愈也。南楚病愈者謂之差。或謂之閒，或謂之知。知，通語也。或謂之慧，或謂之僚，或謂之瘳，或謂之躄，或謂之除。

**穢** is a wrong character. The correct one in the original source(蔡文—the paper of 蔡哲茂) is **愈**:

說「彗」而表示疾愈的語言有很多的字，如《方言》卷三：  
 「差、閒、知、愈也，南楚疾愈者謂之差，或謂之閒，或謂之知；知，通語也，或謂之慧，或謂之僚，或謂之瘳，或謂之躄，或謂之除。」

筴

is a wrong character in the evidence. The correct one is 筴虫筴.

为了给它取名,李四光苦心探索要找一个既形象又科学的名称。他根据这个小动物的形态很像纺锤的特征,因纺锤旧称“筴”(tíng),故他按汉字六书的造字方法,造个字,左边为“虫”旁,表类属,右边用“筴”字,表音兼表意,这就是“筴”字,意思是筴状的虫。他对这种古生物的研究成果并以这个“筴”字为名专门发表了一篇论著为《中国北部之筴科》。这个古生物体的发现与命名,这个“筴”字的创造都已为学术界所认可,此字并列入了《汉语大字典》、《汉语大词典》、《辞海》等大型辞书、字书。国际上“筴”的学名为 Fusulinid。它是一种无脊椎动物,属有孔虫亚纲的一目。它外形很多,以纺锤形最常见。日本译为“纺锤虫”。它最初出现在早石炭世晚期,至二叠纪繁殖孳生最旺盛,在世界上分布范围很广,除澳大利亚和南极洲未发现外,几乎各处都有。到古生代末则逐渐消亡以至完全绝迹了。

**Status:** Liaison Contribution

**Action:** For consideration by IRG

**Date:** 2016-10-02

In addition to the UTC's [previous response](#) to comments against UTC-submitted characters in IRG N2155, to include UTC-submitted characters that have been [postponed](#) or [unified/width-drawn](#), the following table provides the UTC's responses to CJK Working Set 2015 Version 2.0 "Consolidated Comments" (aka IRG N2155) with regard to the disposition of comments against UTC-submitted characters:

Serial #	Source Ref	Glyph	Response
00114	UTC-00972	𢇛	TCA suggested changing radical to #18, and HK requested a fixed representative glyph in terms of its lower-left stroke. The UTC does not agree with the proposed radical change, because U+4E89's radical is #6, not #18. The representative glyph was adjusted per HK's request.
00124	UTC-01074	𢇛	TCA suggested changing radical to #75, stroke count to 6, and first stroke to 4. The UTC does not object to this change.
03560	UTC-01286	𢇛	<p>Japan's suggested unification with U+7097 can be seen as part of larger unifiable components, such as UCVs #300 through #302, and perhaps more explicitly as #303, though the bottom horizontal stroke does not contact the top strokes in the representative glyph, which is also clearly reflected in its evidence. Additional evidence for this character can be found on page 325 of 《古壯字字典》, which indicates that it is a variant of the not-yet-encoded 𢇛+威:</p> <p style="text-align: center;">𢇛 ( 𢇛 𢇛 ) mez [me<sup>2</sup>] 水藻。</p> <p>The UTC therefore objects to unification.</p>

Serial #	Source Ref	Glyph	Response
03718	UTC-01055		HK requested a fixed representative glyph in terms of the arrangement of its right-side components. The representative glyph was adjusted per HK's request.
04319	UTC-00791		Japan stated that the representative glyph does not match its evidence. The UTC's response is that 1) the mismatch between the representative glyph and its evidence is known and was explicitly pointed out in the original submission (in other words, the evidence can be considered to be in error); 2) the representative glyph more closely matches actual/common use; 3) the representative glyph also matches the simplified form and its evidence, in terms of the components and their arrangement (see IRG N2155 04318; UTC-01312); and 4) this character has a great deal of inherent variability, and the UTC feels that the best approach is to encode a "standard" or "common" version of this character, then address its variant forms via the IVD.

The following are additional UTC comments on CJK Working Set 2015 Version 2.0:

Serial #	Source Ref	Glyph	Comments
00109	UTC-02933		Change to radical #42 with a negative stroke count of -1.
00110	UTC-02934		Change to radical #42 with a negative stroke count of -1.

Please find attached to this PDF file revised bitmaps for 00114 (*UTC00972.png*) and 03718 (*UTC01055.png*), along with an updated TrueType font (*UTCHan.ttf*) that reflects the same representative glyph changes.

That is all.

## 1. Unifications

S/N	Ref.	Glyph	Comment	UK Response
00719	UTC-02953	垸	H: Unifiable with U+580D 垸	<p>Do not unify as it is not cognate with U+580D 垸, and the presence or absence of the dot is significant in distinguishing the two characters. U+580D is read tù (with 兔 phonetic), but UTC-02953 is read wǎn (with 免 phonetic), and thus not cognate with U+580D. See 国家基础地理信息系统 1:5 万地名数据库 (1:50000 Placename database of national basic geographical information system) for Liwan Village 李垸村 in Hubei.</p> <p>See also article from <i>Hubei Daily</i> 湖北日报 2015-03-04 page 14 which discusses the correct glyph and reading for the character used in the name of Yuwan Village (see image below).</p>
01416	UTC-02632	揆	H: Duplicate of U+2BF4A.	<p>As discussed in <a href="#">IRGN2108 Andrew WG2N4682.pdf</a> the glyph for U+2BF4A is a mistake. U+2BF4A is the simplified form of U+3A6D 揆, and its correct glyph should be 揆. 01416 (UTC-02632) is a different, non-cognate character (variant of U+632C 揆), and is not unifiable with U+2BF4A. Therefore keep in IRG WS2015.</p>
02995	UTC-01508	稷	J: Unifiable with U+7A37 稷.	<p>This is not a "minor stroke difference", but a completely different component on the bottom right. Unification is not appropriate in this case.</p>

03332	UTC-01401	网大	SAT: Unifiable with U+2627C 𦉰.	This character has been withdrawn. See <a href="#">IRGN2155 UK ReviewP1.pdf</a> p. 10.
03590	UTC-01962	崇	J: Unifiable with U+8417 崇.	03590 (UTC-01962) is the simplified form of U+799C 崇 (yíng 'a kind of ancient sacrifice'), and therefore not cognate with U+8417 (corrupt form of U+7B56 策 cè). The presence or absence of the dot is significant in this case. Do not unify, per PnP draft 2.1.3: "Ideographs with different glyph shapes that are unrelated in historical derivation (non-cognate characters) are not unified no matter how similar their glyph shapes may be."
03611	UTC-01967	蓼	H: Unifiable with U+26C9E 蓼.	Agree. U+26C9E only has T-source and U-source references. It would be useful if U+26C9E could also be given a HDZ G-source reference with the glyph shape of UTC-01967.
03707	UTC-01911	蛭	J: Unifiable with U+86CF 蛭.	03707 (UTC-01911) is the simplified form of U+86F5 蛭 (xīng, in Ancient Chinese 丁蛭 'dragonfly'), and therefore not cognate with U+86CF (chēng 'razor clam'). Do not unify, per PnP draft 2.1.3: "Ideographs with different glyph shapes that are unrelated in historical derivation (non-cognate characters) are not unified no matter how similar their glyph shapes may be."
03774	UTC-01412	衡	J: Unifiable with U+22545 衡.	This character has been withdrawn. See <a href="#">IRGN2155 UK ReviewP1.pdf</a> p. 10.

「垸」字引出的文字公案

玉垸村是明朝由江西迁居阳新的单一血缘村落。村里居民全为李氏宗亲，由赣入鄂已有400多年的历史。

阳新地处吴头楚尾，方言众多，缘于此，阳新语源集赣、湘方言与楚语于一体，形成了独特的“吴楚”方言。其“九板十三腔”被语言学家王力教授称之为研究古方言的“活化石”。

就说这玉垸的“垸”字吧，词典释文是“桥两旁靠近平地的地方”，从土从兔，音读 tù 形声。玉垸人说城里人把咱们的村名写错了，也读错了，应该是“土”旁加一个“兔”字，读“碗”音。但这个“土兔”字在字典怎么也查不出来，玉垸人就说，这个字，在《康熙字典》里才查得出，是古代的人声字。

01514	UTC-01429	𠂇	H: Evidence unclear.	See <a href="#">IRGN2155 UK ReviewP2.pdf</a> pp. 22-23 for additional evidence.
03617	UTC-01969	𠂇	H: Invalid evidence.	As discussed in the original submission (IRGN2107), there is a printing error for this character in <i>Hanyu Da Zidian</i> , but it is clear from the context that the

				submitted glyph is correct.
03860	UTC-02918	誣	SAT: The shape of this evidence is a little ambiguous. It might be unified with 誣 U+46E9.	Unfortunately, the quality of the image is not very good. However, it is clear to us that the right hand side is 誣 not 亞, and these are not unifiable components. Therefore keep this character in IRG WS2015.
05414	UTC-02819	𪗇	H: The glyph is different from the evidence ... the appropriate phonetic component on the right should be 𪗇 as shown in the glyph submitted, not 𪗇 as shown in the evidence.	We concur that the evidence glyph is a mistake, and the submitted glyph is correct.

## 5. Mistaken Unifications

The following five UK-submitted characters are listed as unified or withdrawn in IRGN2155CJKWSet2015\_UnifiedWithdrawn.pdf. We believe that the unification of these characters is mistaken, and we request that these five characters are added back to IRG Working Set 2015.

S/N	Ref.	Glyph	UK Rationale for Keeping in WS2015
00553	UTC-02957	𠄎	Not cognate with U+20C3C 𠄎, and different actual glyph shapes (市 vs. 市), which is significant in this case as they are different phonetic elements.
02204	UTC-01462	𠄎	The difference in glyph shape between 02204 and U+24261 𠄎 is not minor, and the two bottom components should not be considered to be unifiable minor variants. We can find not precedent for unifying characters with these two components, and the occurrence of both characters as separate entries in <i>Zhōnghuá Zìhǎi</i> 中华字海 p.974 argues against unification.
02343	UTC-02856	𠄎	02343 is the traditional character corresponding to U+2C312 𠄎, and traditional and simplified characters should not be unified. The components 將 and 將 are not unifiable, as evidenced by these pairs: <ul style="list-style-type: none"> <li>• U+5968 獎 and U+596C 獎</li> <li>• U+848B 蔣 and U+8523 蔣</li> <li>• U+8780 𦉳 and U+87BF 𦉳</li> <li>• U+91A4 醬 and U+91AC 醬</li> <li>• U+9535 鏘 and U+93D8 鏘</li> <li>• U+9CC9 鱗 and U+9C42 鱗</li> <li>• U+21E83 蔣 and U+5D88 蔣</li> <li>• U+2B98B 𠄎 and U+2B994 𠄎</li> <li>• U+2BF63 擗 and U+646A 擗</li> <li>• U+2C9C0 躑 and U+8E61 躑</li> </ul>

S/N	Ref.	Glyph	UK Rationale for Keeping in WS2015
03555	UTC-01950	苍	<p>03555 is not cognate with U+82B2 苍, and the characters have different actual glyph shapes. 03555 is the simplified form of U+83D5 薺 lún "a type of plant", whereas U+82B2 苍 is a variant form of U+82B1 花 huā "flower". Unifying 苍 and 苍 is a very bad idea as it will mean that U+82B2 will be treated as the simplified form of U+83D5, and so applying a <i>ToTraditional</i> operation to U+82B2 will result in it changing to an unrelated non-cognate character.</p> <p>Moreover, 苍 and 苍 do not have the same glyph form in China, and the glyph forms are not interchangeable. In China the simplified component 仑 lún is written with the slanted stroke not going through the bent stroke (乚); whereas the bottom component of U+82B2 苍 is written with the slanted stroke going through the bent stroke (乚). Therefore 03555 and U+82B2 have distinctly different glyph shapes in China.</p>
05051	UTC-02343	鬚	<p>05051 is the simplified character corresponding to U+9B17 鬚, and simplified characters cannot be unified with the corresponding traditional form. The component 𦍋 in 05051 is a simplified component, and not unifiable with the non-simplified component 𦍋 in U+9B17, as evidenced by these pairs:</p> <ul style="list-style-type: none"> <li>• U+748A 璫 and U+2B7A9 璫 (Ext. D)</li> <li>• U+4761 獠 and U+2C94A 獠 (Ext. E)</li> <li>• U+93CB 鏞 and U+2CB6E 鏞 (Ext. E)</li> <li>• U+29798 饒 and U+2CCCCF 饒 (Ext. E).</li> </ul> <p>Note that 04374 (UTC-02093) 饒, which has the same component 𦍋, was explicitly not unified with U+409D 饒 at IRG46.</p>

Responded by Chen Zhixiang:

1. 𠂔 ( U+20063 ) in Zhuang character means a part or a side. In fact, this meaning of 𠂔 ( U+20063 ) should be from the figure of

𠂔 ( U+20063 ) which is half of 門 ( door ) . So the right-side component of 𠂔<sup>G\_Z3171104\*</sup> and 𠂔 is 𠂔 ( U+20063 ) .

2. The pronunciation of 𠂔 ( U+20063 ) in Zhuang character is [bi:ŋ³] ≈ [pi:ŋ³] of 𠂔 . So 𠂔 ( U+20063 ) is the phonetic component of 𠂔 .

3. 𠂔 is a variant of 𠂔. 𠂔 is the Simplification of 門. So left-side component of 𠂔 is 𠂔 ( U+20063 ) which is half of 門.
