

IRG N2205 v2

Title: Proposal to Modify J-source Glyph / Mapping for U+3B27

Author: Henry Chan

Source: Eiso Chan, Henry Chan

Type: Individual Contribution to IRG #48

Date: 2017/06/08

---

### Issue

The Code Chart for U+3B27 is as follows:

3B27		
日 72.14	T7-3F76	JA-2622

The difference between the middle 大 and 人 looks rather substantial for an inter-locale unification.

The codepoint mapped in Mojikiban are as follows:

		
<u>MJ001660</u>	<u>MJ001661</u>	<u>MJ001662</u>

### Suggested Changes

It is suggested that MJ001660 be set as the default glyph for highest consistency. The glyph using 日 at the top and 大 (収) in the middle is more etymologically correct.

Furthermore, MJ001660 has a default IVD of 3B27\_E0100 while that of MJ001661 is 3B27\_E0101. It seems setting MJ001660 is a better choice than MJ001661.

The source reference could also be changed to JMJ-001660.
