1. Introduction

IRG always uses the Kangxi Radical Rule to array all the ideographs submitted by each member, so Radical Moon and Radical Meat can't be unified absolutely. [IRGN1950 Part 1](#) had shown the disunified examples between these two radicals, please see Table 1.1.

Table 1.1 The Disunified Examples between Radical Moon and Radical Meat on IRGN1950

¹ The kRSUnicode and the kTotalStrokes values for U+3B3A are in error possibly. The correct kRSUnicode value should be 74.9 and the correct kTotalStrokes value should be 13. Eiso has already sent an error report to Rick McGowan.

Marcus found out one more disunified example, please see Table 1.2. This example should be added to the new UCV or NUC document.

Radical Moon and Radical Meat should be treated to non-cognate according to Kangxi Radical Rule. Most of the encoded ideographs which the radical is Radical Moon and which the radical is Radical Meat are no problem, but the situations of some ideographs are confusing.

Prof. Wáng Lì gave some comments on distinguishing the differences between Radical Meat and Radical Moon. Please see Figs. 1.1 through 1.3. We think we need to add some use cases of the

Chinese names for organic compounds under Radical Meat, because the dictionary written by Prof.

Wáng was discussing several cases about the ancient Chinese.

肉 部

[肉部總論]

肉部的字,大致可以分爲以下五類。一至三爲本體,四至五爲社會對肉的使用:

(一)人與動物的肢體、器官等。例如:肱 臂 肩 胛 肘 股 胯 脛 脚
膝 膂 脊 背 膺 肋 脊 胸 臀 脣 臉;腑 臟 腹 肚 腰 肝 肺
腎 胃 脾 腸 膽 膀 胱;腦 脂 肪 腴 膈 膜 腱 肌 膚

(二)幼體、後代,以及動物的生育。例如:胚 胎 胞 胤 胃;育 贖

(三)肌體肥瘦、病變和特殊的氣味。例如:肥 羶 腫 膿 腐 朮 臊 膻

(四)有關肉食方面的。例如:醬 膾 膳 肴 腊 腌 醬 脩 臠

(五)有關祭祀方面的。例如:胙 臘 膾 膾 膾

月 部

[月部總論]

月的字大多數與月亮和時間有關。

(一)有關月亮的名詞,例如:月

(二)有關月亮的形容詞,例如:朗 朧

(三)有關時間的詞,例如:朔 望 期 朝

(四)與月亮、時間無關的詞,例如:有 服 朋 朕

Radical Meat 肉部

- A) Human beings' and animals' limbs and organs, such as 肱 (U+80B1), 胛 (U+80DB), 肘 (U+8098), 股 (U+80A1) and so on.
- B) Larvae, offspring and reproduction of animals, such as 胚 (U+80DA), 胎 (U+80CE), 胞 (U+80DE), 贖 (U+2688C) and so on.
- C) Bodies' stature, lesions and special smells, such as 肥 (U+80A5), 臞 (U+81DE), 腫 (U+816B), 膿 (U+81BF) and so on.
- D) Related to meats, such as 膾 (U+81BE), 膳 (U+81B3), 腊 (U+814A)², 腌 (U+814C) and so on.
- E) Related to sacrifices, such as 胙 (U+80D9), 臘 (U+81D8), 膾 (U+81B0), 膾 (U+81A2) and so on.
- F) Organic compounds, such as 脉 (U+43E1), 脉 (U+80E8), 脉 (U+43D3), 胺 (U+80FA) and so on.

Radical Moon 月部

- A) Nouns related to moon, such as 月 (U+6708) and so on.
- B) Adjectives related to moon, such as 朗 (U+6717), 朧 (U+6727) and so on.
- C) Characters related to time, such as 朔 (U+6714), 期 (U+671F), 朝 (U+671D) and so on.
- D) Miscellaneous departments, such as 有 (U+6709), 服 (U+670D), 朋 (U+670B), 朕 (U+6715) and so on. This one needs to explain specially. Some components which the original forms were 日 (such as 皓, U+3B36), 丹 (such as 青, U+9752), 舟 (such as 服, U+670D) should be set here based on Kangxi Radical Rule.

² The Putonghua pronunciation here is xī not lǎ.

Kangxi Radical Rule is a more universal and more appropriate radical rule for Chinese Hànzì, Japanese Kanji, Korean Hanja and Vietnamese Chữ Hán. Zhuang characters and Chữ Nôm are created by imitating Hànzì or Chữ Hán, so the radical rules of Hànzì or Chữ Hán, which it means Kangxi Radical Rule here, should be suitable for them in most of the time.

We request IRG for consideration to distinguish Radical Moon and Radical Meat for the submitting ideographs more unequivocally in the future.

And now this document shows several issues for Radical #74 Moon (月部) and Radical #130 Meat (肉部). We try to point out these unrational places for encoded ideographs.

There are 47 issues to be discussed in this document, 12 issues for the misunifications, 6 issues to request for non-cognate ideographs, 5 issues for the possible incorrect glyph designs, 22 issues for the possible inconsistent radicals and 2 issues to request for the second kRSUnicode values.

Please see Table 1.3.

Marcus, Gienwen and Eiso raised most of these issues, and Eiso has discussed the principle for Radical Moon and Radical Meat with Prof. Wěi Shùguān (韦树关) and Prof. Lín Yì (林亦).

Misunifications

(Issues 2 through 13)

2. Misunification for U + 3B3F

The following figure shows the current glyphs for U + 3B3F.

Fig. 2.1 The Current Glyphs for U + 3B3F on Unicode, Version 10.0.0

[USourceData-10.0.0.txt](#) shows the information for UTC-00732 glyph. “kCheungBauerIndex”

The meaning of UTC-00732 glyph is “cheeks (face)”, so the radical of it is Radical Meat not

Radical Moon. The radical and stroke information for UTC-00732 glyph in

USourceData-10.0.0.txt is 130.12. UTC-00732 glyph and other source glyphs for U + 3B3F are

non-cognate.

We request for consideration to re-assign UTC-00732 glyph as a new code point.

On the other hand, the radical of V2-8166 glyph looks like Radical Meat, but the website of VNPF showed the meaning was “the bottom of a bow”, we couldn’t distinguish which radical was suitable for it according to this meaning. Please see Fig. 2.3.

If Vietnam NB confirms the radical of V2-8166 glyph is Radical Moon, the situation for it should be kept.

If Vietnam NB confirms the radical of V2-8166 glyph is Radical Meat, this glyph should be moved to the possible new code point and unified with UTC-00732 glyph.

3. Misunification for U+43D9

The following figures show the current glyphs for U+43D9 and its compatibility ideograph.

Two T-Source glyphs had been unified, but we can distinguish T4-2765 glyph and T5-264A glyph are non-cognate clearly. The radical of T4-2765 glyph is Radical Meat, and the radical of T5-264A glyph is Radical Moon. Please see Figs. 3.3 through 3.4.

T4-2765 glyph which the radical is Radical Meat means “肉汁滓” or “短醜貌”. Please see Figs. 3.5 through 3.6. T5-264A glyph which the correct radical should be Radical Moon means “月落有明”. The website *Dictionary of Chinese Character Variants* created by education department of Taiwan showed the evidence from 《玉篇》, 《四聲篇海》, 《字彙》 and 《重訂直音篇》. Please see Figs. 3.7 through 3.10. Marcus found out a new evidence for T5-264A glyph in a modern book. Please see Fig. 3.11. The pronunciations for T4-2765 glyph and T5-264A glyph are

different, too. “他感切” and “丁紺切” are **thomX* and **tomH*³ in the Middle Ancient Chinese (Baxter-Sagart System), “直遠切” is **drjwonX*.

There are two non-cognate characters in Kangxi Dictionary, they can't be unified with each other.

Please see Figs. 4.3 through 4.4. The ideograph on Fig. 4.3 means “red” and it's the variant form

of 臄 (U+3956), the one on Fig. 4.4 means “sick”. And the pronunciations are different. “倉紅

The radical for T5-3B50 glyph is Radical Meat, but T6-497E glyph is Moon. We suggest for consideration to move T5-3B50 glyph to U + 440B and re-assign T6-497E glyph as a new code point, and the evidence for T6-497E glyph is Fig. 4.3.

Kangxi Dictionary is a very important dictionary in mainland China. We request for consideration to add kIRG_GSource value for the possible new code point (unified with T6-487E) as China's horizontal extension when the new code point will be included in the future, and we think the best value is GKX-0506.14 according to Fig. 4.3.

If Korea NB thinks the new code point which the radical is Radical Moon is necessary for Korea as well, we think the better KIRG_KSource value for it is KU-nnnn. “nnnn” is the possible new code point.

5. Misunification for U+671C

The following figure shows the current glyphs for U+671C.

Fig. 5.1 The Current Glyphs for U+6711 on Unicode, Version 10.0.0

The left part of T4-3829 glyph looks like Radical Meat. 《汉语大字典》V2 shows the variant form of 月享 glyph is 𩚑 (U+3B3F) which is different from UTC-00732 glyph, but 《龍龕手鑑》 shows the other meaning and the radical of the glyph on Fig. 5.3 is Radical Meat. Please see Figs. 5.2 through 5.3. The radical of J1-4273 glyph (aka MJ013556) is Radical Moon and the pronunciation is トン according to IPA MJ Searching System.

If TCA confirms the T4-3829 glyph is right for them, we think it and J1-4273 glyph are non-cognate. Therefore, we request to re-assign T4-3829 glyph as a new code point.

Table 5.1 Information for a Possible New Requested T-Source Ideograph

Otherwise, TCA should fix the T4-3829 glyph. And then we request TCA or UTC to submit a 𠄎

月享 glyph which the radical is Radical Meat according to Fig. 7.3 in the future.

6. Misunification for U + 6721

The following figures show the current glyphs for U + 6721 and its compatibility ideograph.

Fig. 6.1 The Current Glyphs for U + 6721 on Unicode, Version 10.0.0

Fig. 6.2 The Current Glyphs for U + 2F8DA on Unicode, Version 10.0.0

There are two non-cognate characters in Kangxi Dictionary, they can't be unified with each other.

Please see Figs. 6.3 through 6.4. The ideograph on Fig. 6.3 means “船著不行” which the radical is Radical Moon, the one on Fig. 6.4 means “狂病” which the radical is Radical Meat.

The radical of HB2-DF7A glyph and T2-4641 glyph looks like Radical Meat not Radical Moon.

We request for consideration to change the kRSUnicode value for U + 6721 to 130.9 and re-assign

T5-3F66 as a new code point.

We request Korea NB to confirm the radical of K2-394F glyph. If the radical is Radical Meat, please keep it unify with U+6721; if the radical is Radical Moon, please move it to the possible new code point and be unified with T5-3F66 glyph.

7. Misunification for U + 80AD

The following figures show the current glyphs for U + 80AD and its compatibility ideograph.

Fig. 7.1 The Current Glyphs for U + 80AD on Unicode, Version 10.0.0

Fig. 7.2 The Current Glyphs for U + 2F8D6 on Unicode, Version 10.0.0

There are two characters in Kangxi Dictionary. Please see Figs. 7.3 through 7.4. The interpretations of the glyphs on Fig. 7.3 and Fig. 7.4 on Kangxi Dictionary is confusing, but we can recognize there are two non-cognate characters, one means “朔而月見東方謂止縮𠂔”, the other means “行太疾也”. The radical of the first one is Radical Moon, and the radical of the second one is Radical Meat. 《汉字源流字典》 distinguish two characters clearly. Please see Figs. 7.5 through 7.6. Therefore, we think the one which the radical is Radical Moon and the other one which the radical is Radical Meat can’t be unified with each other. The better way is to encode them as two different code points. The one which the radical is Radical Moon is the variant form of 𠂔 (U + 6712) according to Figs. 7.5 through 7.6.

𦍋 nà; nù
(膍、朏)

【字形】篆 

【构造】形声字。𦍋有两个来源: 一个是篆文, 从肉(月), 内声; 另一个从月(月亮), 肉声。隶变后楷书分别写作膍与朏。膍俗也省作𦍋, 二字成了同形字。

【本义】《说文·月部》段注: “朏, 朔(月初)而月见(现)东方谓之缩朏。从月, 肉声。”本义为夏历月初月亮在东方出现。《玉篇·肉部》: “膍, 膍朏, 肥软也。”用作“膍朏”, 本义为肥软的样子。

【演变】⊖ nà 作为本字, 用作“膍朏”, 本义为①肥软的样子: 猿眠但膍~, 鬼食时嗟啜(水鸟吞食)。又指②海狗。哺乳动物, 毛紫褐色或深灰色, 四肢短, 像鳍, 有蹼, 尾短, 生活在海洋中, 能在陆上爬行。也叫海熊。

⊖ nù 作为“朏”的简省, 指③夏历月初月亮在东方出现: ~朏(晦而月现西方)警阙(朏

朏失度, 警人君有所失德), 朏(月未成光)魄(月始生)示冲(谦冲不自大)。

T6-2C23 glyph accords with Radical Moon for T-Source radical rule, so we request for consideration to re-assign T6-2C23 glyph as a new code point.

We request for consideration to add KIRG_GSource value for the possible new code point (unified with V2-787E) as China's horizontal extension when the new code point will be included in the future, and we think the best value is GZ-0712303 according to Fig. 11.6.

12. Misunification for U + 26744

(This issue was raised by Prof. Wěi Shùguān.)

The following figure shows the current glyphs and the kRSUnicode value for U + 26744.

Fig. 12.1 The Current Glyphs for U + 26744 on Unicode, Version 10.0.0

VNPF gave five interpretations for U + 26744. Please see Fig. 12.2. However, Prof. Wěi thought the radical of “răng” glyph, “cữ” glyph, “lưng” glyph is Radical Meat, the radical of “giăng” glyph, “trăng” glyph is Radical Moon. They are non-cognate, and “giăng” and “trăng” are different pronunciation in different Vietnamese dialects for the same character.

Fig. 12.2 U + 26744 on VNPF

Quốc Ngữ	Hán-Nôm	Codepoint	Context	Ref.	English
răng	𦍋	U+26744	mọc răng, hàm răng	vhn	to teeth; to grow teeth; denture, set of teeth
cữ	𦍋	U+26744	kiêng cữ, ở cữ	gdhn	to abstain from, to forbear
giăng	𦍋	U+26744	giăng hoa (có tính trăng hoa)	gdhn	to run after women
lưng	𦍋	U+26744	lưng sau	gdhn	
trăng	𦍋	U+26744	mặt trăng	gdhn	moon

We provide more additional evidence for these possible two non-cognate characters. Please see Figs. 12.3 through 12.9. Fig. 12.3 is for “răng” glyph, Figs. 12.4 through 12.5 are for “giăng” glyph, Figs. 12.6 through 12.7 are for “lưng” glyph and Figs. 12.8 through 12.9 are for “trăng” glyph.

The radical of the glyph on Fig. 12.3 and Fig. 12.7 is Radical Meat clearly, because “nhục” means

U+2339F (𠄎) which the radical is Radical Moon and U+26805 (𠄎) which the radical is Radical Meat are both included in Unicode. There is G-Source reference on U+26805. We hope China NB to confirm the meaning and the variant relation of GIDC-706 glyph.

If GIDC-706 glyph is the simplified form of U+2339F, nothing needs to be changed.

If GIDC-706 glyph is the simplified form of U+26805, we request to change the kRSUnicode value for U+2B785 to 130.6.

If China NB thinks it's unnecessary to encode two 𠄎 𠄎 glyphs, we request to add the second kRSUnicode value for U+2B785 to 130.6.

14. Request for a non-cognate ideograph from U+43F4

The following figures show the current glyphs for U+43F4.

Fig. 14.1 The Current Glyphs for U+43F4 on Unicode, Version 10.0.0

It's correct that the radical of U+43F4 is Radical Meat. However, we found out the other 宵 glyph which the radical is Radical Moon. Please see Figs. 14.2 through 14.3. The 宵 glyph on Fig. 14.2 is the variant form of 宵 (U+5BB5). The meaning is about time, so the best radical of the other 宵 glyph is Radical Moon.

It's correct that the radical of U+812E is Radical Meat. Kangxi Dictionary and many other dictionary all support this meaning, but we found the other 𠂔 glyph which the radical is Radical Moon. 《金文人名彙編》 shows 𠂔 is a person name of a Marquis of the State of Yan. Please see Fig. 15.2. The radical of this 𠂔 glyph should be Radical Moon not Radical Meat according to Figs. 15.3 through 15.4.

墨字聲系(明 職)

𦇧(墨聲明 職)晦(曉 之)

晦: 𦇧汗3·35 庶𦇧四4·17 老𦇧𦇧並四4·17 庶

前兩形左部从月，兩相對照可以看出同出於《王庶子碑》的後兩形左部所从應是“月”形訛變，則此古文可隸定成“𦇧”。《注釋》(255 頁)認為“𦇧”可能與《篇海》中訓為“濁垢也”的“𦇧”同字。按，我們意見與此不同，按照一般規律，“𦇧”應該分析成从月墨聲，從出土文獻看，墨聲字可與“晦”字通用，如“墨、晦”通用，《睡虎地秦墓竹簡·日書甲種》：“墨日，利壞垣、徹屋，出寄者，毋歌。”其中的“墨”整理者讀為“晦”，

從文義看，該說可信。“𦇧”从墨聲。而作為意符時，“月”形和“日”形可換用，可見“𦇧”字與“晦”音義皆相近。另外，還可從古文字諧聲角度加以論證，郭店簡《窮達以時》(7号簡)：“百里轉鬻五羊，為伯牧牛。”其中的“牧”字作𦇧，从“墨”得聲，而“牧”字異體可从母作(參之部“母”與“牧”條)，“母”是“每”的聲符。故墨字聲系當可與每字聲系音近。此處二者應為通假關係，“𦇧”字當來源有據。

Possible incorrect glyph designs

(Issues 20 through 24)

20. Possible incorrect glyph design for U+6725

The following figure shows the current glyphs for U+6725.

Fig. 20.1 The Current Glyphs for U+6725 on Unicode, Version 10.0.0

The radical of H-8EDC glyph looks like Radical Moon, but the radical of T3-6633 glyph looks

like Radical Meat. UniHan Database shows U+266E8 (勝) is the simplified form of U+6725.

These characters are very popular in some Min dialects areas. Please see Figs. 20.2 through 20.3.

“勝餅” or “勝餅” is a popular local snacks in Teoswa area. We guess H-8EDC glyph is

according to this meaning because there are so many Teoswa businessmen in Hong Kong. Mr.

Ahkew (李永球) wrote that the original Chinese name of “砂拉越” or “沙撈越” (aka Sarawak in

Malaysia) is “砂勝越” and “勝” is a common place name character in Malaysia. This place name

character is an ideograph for Teoswa dialects without any doubt. So we will know which glyph is

more suitable for the Min dialects between H-8EDC glyph and T3-6633 glyph.

Fig. 20.2 乌豆沙勝餅

Fig. 20.3 太平福建公冢《募建冢亭小引》碑志 in Malaysia

<http://ahkew.blogkaki.net/viewblog-28526/>

The meaning of GE-2D3E glyph, H-8EDC glyph, T3-6633 glyph and its simplified form is “lard” (for Teoswa dialects) and “the smell of mutton” (for Xiang dialects) according to Figs. 20.4 through 20.5. Fig. 20.5 shows 𠂔月勞 glyph is the dialect form of U+818B (𦘔) directly. We think the radical of GE-2D3E glyph, H-8EDC glyph, T3-6633 glyph is Radical Meat.

Please see Fig. 20.6. This figure shows that K4-00B5 glyph is the variant form of U+7646 (𩚑).

We found out an important use case of U+6711 is a person name. 曾進𨾏 is the originator of 裕隆印刷廠 in Tainan City according to Fig. 25.5. There are 13 search results about this person on Baidu, 263 search results on Google. Please see Figs. 25.6 through 25.7. We think 曾進𨾏 is a famous person in some fields in Taiwan according to the search results. We also found out a PDF document about 曾進𨾏, and we could know this person name wasn't messy code clearly. Please see Fig. 25.8. However we don't know his courtesy name (表字) or his brother's names at this time, so we can't confirm which radical the radical of 𨾏 is in this case.

[147-C15] Consensus: Accept the addition of a second kRSUnicode value for U+2C080, which would be 130.7, for Unicode version 10.

[147-A45] Action Item for Michel Suignard: Add a second kRSUnicode value for U+2C080, of 130.7, for Unicode version 10.

However, we think the old kRSUnicode value for U+2C080 is useless and irrational, now we request to remove the first kRSUnicode value. 130.7 is the best value for U+2C080 to search easily.

These two dictionaries both claimed this character was from 《龍龕》, but no person could find out this one on 《龍龕》 as what Prof. Zhāng wrote on Fig. 47.4. We need to be clear about this: there is only Radical Meat on 《龍龕》. All the characters which the radical is Radical Moon had been included under Radical Meat, so we need to determine the radical of the characters which

their evidences are from 《龍龕》 should be according to their meanings not the original radical on 《龍龕》.

𦔻¹⁰

zāng 《篇海·肉部》引《龍龕》：“𦔻，子郎切。”《字彙補·肉部》：“𦔻，見《金鏡》。”（《漢》2105 B，參《字海》916 B）
按：此字今本《龍龕》未見，疑是“𦔻”的訛俗字。“日”旁“月（yuè）”旁形近，意義上亦有相通之處，故此二旁俗書常可換用。《龍龕》卷四肉部：“𦔻，俗，於計反，正作𦔻，陰風也。”又云：“𦔻，俗，烏對反。”（414）《字海》謂“𦔻”同“𦔻”（921 c），皆其例。《集韻》平聲唐韻茲郎切（與“子郎切”同音）：“𦔻，明也。”（222）“𦔻”“𦔻”音同形近。校按：此字也可能為“𦔻”（俗作“𦔻”）的俗字，參上“𦔻”字條。

Prof. Zhāng thought 𦔻 is the variant form of 𦔻 (U+2325A) or 𦔻 (U+7F98), so the possible better radical of U+267C3 is Radical Moon.

We request for consideration to add the second kRSUnicode value for U+267C3, and this value is 74.10.

However, 《汉语大字典》V2 should provide the other train of thought about this character for us. Please see Fig. 48.2. Fig. 48.2 shows that 𩚑 (U+26877) is the variant form of 𩚑 (U+3B23), so the better radical of U+26877 is Radical Moon.

50. Acknowledgement

Prof. Wěi Shùguān (韦树关) from Guangxi University of Nationalities (广西民族大学) helped us solve some questions about Chữ Nôm. He is an important scholar of studying Chữ Nôm for Jing Nationality in China.

Prof. Lín Yì (林亦) from Guangxi University (广西大学) gave some advice on Zhuang characters. She is an important expert on Zhuang languages and Zhuang characters. She has an in-depth study of Zhuang characters encoding for several years.

Mr. Nguyễn Đức Anh (阮德英) provided some evidences for Chữ Nôm.

Mr. Henry Chan (陳輝恒) pointed out some deficiency on the draft document.

Miss Wāng Qīng (汪清) shared her teaching story which she taught her primary school students to distinguish the differences between Radical Moon and Radical Meat with Eiso when she heard he was writing this document.

Miss Tzungyin Chen (陈宗银) provided some important information of U + 6725 (勝) and U + 266E8 (勝) in the Teoswa Area, especially in Chénghǎi District, Shàntóu City (汕头市澄海区).

Mr. DaeHyun Sung (成大鉉, 성대현) provided the meaning of U + 6725 in R. O. Korea when we didn't know how to handle the K-Source glyph.

Mr. Táo Yáng (陶扬) helped us to distinguish the differences between “侯” in ancient China and Marquis in ancient Europe.

Mr. Kushim Jiang (姜兆勤) helped us on some Chemistry issues.

Mr. Téng Bō (滕波) helped us on some Zhuang characters issues. He has his own unique opinions on Zhuang characters.

Dr. Zhāng Jìngfēn (张静芬), Miss Zhāng Lìlán (张丽兰), Miss Xú Róngshān (徐蓉姗), Mr. Shào Xuékuān (邵学宽) and Mr. Jerry You (游程宇) gave some help on Min dialects of Nán'ào (南澳), Jiēyáng (揭阳), Léizhōu (雷州), Diànbái (电白) and Xiàmén (厦门).

Mr. Mo Nigeria gave some help on Southwestern Mandarin dialects. He spent a lot of time studying Sìchuān dialects and making an iOS app for Sìchuān dialects which was named Prickly Ash (刺椒).

Thanks to them very much.

In IRGN2239, Eiso Chan pointed out several issues for Radical #74 Moon (月部) and Radical #130 Meat (肉部). The 47 issues mentioned in IRGN2239, TCA mainly responds to the T glyphs part.

To sum up, in the 24 T glyphs mentioned in the document, TCA confirms that 11 glyphs are correct (part 3&4), and proposes to update 1 glyph (part 1) and adjust the radical or code point of 12 glyphs (part 2). Please see below for details.

1. TCA update glyph

The Hong Kong Special Administrative Region's Feedback on IRGN2239

This document provides feedback of the Hong Kong Special Administrative Region (HKSAR) on IRGN2239. Among the 47 cases mentioned in the said IRG document, the HKSAR has reviewed 7 cases involving H-glyph, namely U+43D9, U+26893, U+6725, U+80BC, U+80BD, U+8137 and U+266E8. Our feedback is as follows.

1. Misunification for U+43D9 (under Paragraph 3 of IRGN2239)

The glyph in the Hong Kong Supplementary Character Set 2016 (HKSCS-2016) and H-8A76 in H-column of the code chart are in order, with both adopting 肫 as the left component.

HKSCS-2016	Code chart

2. Request for a non-cognate ideograph from U+26893 (under Paragraph 19 of IRGN2239)

The glyph in the HKSCS-2016 and H-9E69 in H-column of the code chart are in order, with both adopting 臙 as the left component.

HKSCS-2016	Code chart
26893 臙 H-9E69	26893 肉 130.15 臙 臙 UCS2003 H-9E69

3. Possible incorrect glyph design for U+6725 (under Paragraph 20 of IRGN2239)

In the HKSCS-2016, the glyph has been updated by changing the left component from

月 to 月:

HKSCS-2016	Code chart

The glyph of H-8EDC in H-column of the code chart is pending update as requested in IRGN2258:

Request to Update HKSCS Glyphs

6. In line with the Reference Glyphs for Chinese Computer Systems in Hong Kong lately published by the HKSAR Government, the style of many glyphs of the HKSCS-2016 is aligned. As such, we request that the HKSCS glyphs be updated in the light of the HKSCS-2016. The comparison of all the 4 579 HKSCS-2008 glyphs with those in the HKSCS-2016 is shown in Table 2. For ease of reference, changes are illustrated in Annexes I to VII.

4. Possible incorrect glyph design for U+80BC (under Paragraph 21 of IRGN2239)

The glyph in the HKSCS-2016 and H-89AE in H-column of the code chart are in order, with

both adopting 月 as the left component. No change to the left component is required.

6. Possible incorrect glyph design for U+8137 (under Paragraph 23 of IRGN2239)

In the HKSCS-2016, the glyph has been updated by changing the left component from

月 to 月:

HKSCS-2016	Code chart
8137 肏 H-9563	8137 肉 130.7 肏 肏 GH-1281 H-9563

The glyph of H-9563 in H-column of the code chart is pending update as requested in IRGN2258:
