Title: IRGN2445R Proposal to Correct Four Vietnamese Glyphs

Source: Vietnam

Status: National Body Proposal

Authors: Eiso Chan, Lee Collins, Ngô Thanh Nhàn

Action: For consideration by the IRG

Date: 2021-03-17

Vietnam proposes to change the glyphs of four V-source characters to bring their forms in line with their actual sources and etymologies. The characters are:

U+22ADC 拴 chùm, cùm, đùm, trụm

U+230F2 旗 vuông

The proposed changes are:

U+26F28 U+22ADC ½ U+25B27 E U+230F2 於

Here follows a discussion of the rationale for the changes.

1. U+26F28

26F28 ^與 140.12 UC\$2003 UC\$2003 V2-8244

This character is intended to represent the word, $c\tilde{u}$, meaning "old", and, as shown in T_{ll} \tilde{U} \tilde{U}

麒 cũ

#F1: cựu 舊 → 苗□具 cụ

O Từ ngày xưa để lại.

拯咍傳祺 流傳固空

Chẳng hay chuyện cũ lưu truyền có không.

Đại Nam, 4a

A variant from of U+26F28 is found in *Giúp đọc Nôm và Hán Việt*, which also shows 具 as the phonetic.

The current form of U+26F28 uses the phonetic element $ot \exists
ot$, read $b\hat{oi}$. This is clearly wrong. The correct form was proposed for IRG WS-2017 as V-F04EB. After review of the semantics and shape of U+26F28 and V-F04EB, the IRG proposed unification, with changes to U+26F28 to

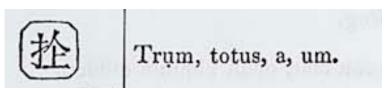

replace 貝 with 具. Vietnam agrees. The glyph change implies a corresponding change to the stroke count from 12 to 13, resulting in total stroke count of 17.

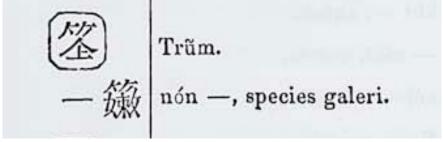

kRSUnicode 140.13 kTotalStrokes 17

2. U+22ADC and U+25B27

These two characters can be discussed together, since their various readings chòm, chùm, cùm, dùm, trụm, and trũm, show that they share a common phonetic element, trùm, U+201B3 全. 全 is formed on the 會意 hội ý principle, with the 2 characters 三人上 "person above", meaning "head man, chief, etc." The current glyphs show the phonetic as 三人上 (eight, above), but there is no character in Vietnamese with this shape, and the phonetic and source evidence clearly shows 全, as seen below in these entries from *The Dictionarium Anamitico-Latinum*.

Our proposal is to replace the component 三八上 with 全.

U+22ADC

Ⅲ扌全 Ⅲ竹全

U+25B27

No data changes are required.

3. U+230F2

Our proposal is to replace $\Box \Pi$: with $\not\models$. The stroke count remains the same, so no data changes are required.
