Title:	Disunification request for 8 characters
Status:	Individual Contribution on IRG #58
Action:	To be considered by IRG

Introduction

We found 8 pairs of characters that need to be disunified.

- >> U+681D (𣎵)
- >> U+6B25 (𣎶)
- >> U+6C97 (𣎷)
- >> U+929B (𣎸)
- >> U+46B0 (𣎹)
- >> U+208B7 (𣎺)
- >> U+216BA (𣎻)
- >> U+2335F (𣎼)

1. U+681D (𣎵)

According to the regional conventions in Taiwan, the right part of “活” is different from “𣎵”, which can be distinguished by the first stroke. These two components are non-cognate. But U+681D has both the one with the right part “𣎵”(shé) and the another with the right part “𣎵”(guā), thus the two characters need to be disunified.

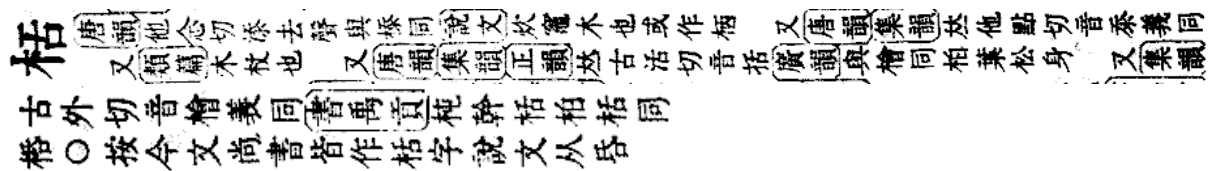

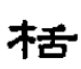

Figure 1 Evidence from 康熙字典同文書局原版 P522

 說文·木部
 
 老子乙
二二五上
 
 趙薊殘碑

《說文》：“栝，炊竈木。从木，舌聲。”

(一) tiǎn 《廣韻》他玷切，上忝透。談部。

① 撥火棍。《說文·木部》：“栝，炊竈木。”桂馥義證：“炊竈木者，《六書故》：‘栝，進火木。’”段玉裁注：“炊竈木，今俗語云竈棒是也。《廣韻》云：‘棒，火杖。’栝(栝)、棒古今字也。”元尹廷高《車中作古樂府》：“停車少憩日又出，束栝營炊道傍屋。”

② 木杖。《集韻·忝韻》：“栝，木杖也。”唐李白《大獵賦》：“擺樁栝，開林叢。”《農政全書·農器·圖譜一》：“(耙)其耜兩端木栝，長可尺三，前稍微昂，穿兩木柵，以繫牛輓鈎索。”

(二) kuò 《廣韻》古活切，入末見。月部。

① 槩。《集韻·末韻》：“栝，《說文》：‘槩也。’”

② 箭末扣弦處。《集韻·末韻》：“栝，矢栝築弦處。”《莊子·齊物論》：“其發若機栝，其司是非之謂也。”《淮南子·兵略》：“夫栝，淇衛箇箛，載以銀錫，雖有薄縞之幘，腐荷之矰，然猶不能獨射也。”高誘注：“栝，箭栝。”《樂府詩集·橫吹曲辭五·隔谷歌》：“弓無弦，箭無栝。”

③ 木名，即桧。《廣雅·釋木》：“栝，栢也。”王念孫疏證：“栝，與檜同。《爾雅》云：‘檜，柏葉松身。’是栝即栢之別種，故以栝為栢也。”《玉篇·木部》：“栝，木名。栢葉松身。”《書·禹貢》：“柟榦栝柏。”孔傳：“柏葉松身曰栝。”唐杜甫《別張十三建封》：“雖當霰雪嚴，未覺栝栢枯。”

Figure 2 Evidence from 汉语大字典第二版 P1285

According to the evidences listed above, U+681D has two completely different pronunciations and meanings. The pronunciation tiǎn corresponds to the phonetic component “甜省”(i.e. 舌); while the pronunciation kuò corresponds to the phonetic component “舌”. So the two characters are phonetically, graphically and semantically different and need to be disunified.

681D
 木 75.6
 

Figure 3 U+681D in CodeCharts of Unicode 14.0

In order not to affect the use of the regions where “舌” and “舌” are not distinguished, we suggest to retain kuò(i.e. 栝) on U+681D and encode tiǎn(i.e. 栝) separately.

Glyph	Mandarin	IDS	RS	FS	Variant	Source Reference
栝	tiǎn	栝木舌	75.6	1	栝 U+3B87	GKX-0522.19

Table 1 Information of GKX-0522.19

2. U+6B25 (𠵹)

The left part of U+6B25 is “日”(yuē). It is also used for the another one with the left part “日”, however, they are non-cognate.

4. U+929B (𧰨)

According to the regional conventions in Taiwan, the right part of “活” is different from “舌”, which can be distinguished by the first stroke. These two components are non-cognate. But U+929B has both the one with the right part “舌”(shé) and the another with the right part “舌”(guā), thus the two characters need to be disunified.

Figure 14 Evidence from 康熙字典同文書局原版 P1305

《說文》：“銛，銛屬。从金，舌聲。讀若椌。桑欽讀若鑣。”段玉裁注：“舌者口舌字，非聲，當作因，舌兒也，他念切，此甬屬之銛，皆用為聲。”按：《六書故·地理一》：“舌非聲，乃甜省聲也。”

(一) xiān 《廣韻》息廉切，平鹽心。談部。

① 甬屬。《說文·金部》：“銛，甬屬。”段玉裁注：“甬即上文田器之銛也，其屬亦曰銛。”《廣雅·釋器》：“鉞謂之銛。”王念孫疏證：“《說文》：銛，甬屬也。”按：《集韻·脂韻》：“鉞，犁鎔也。”《論衡·幸偶》：“等之金也，或為劍戟，或為鋒銛。”

② 捕魚具。《廣韻·鹽韻》：“銛，《纂文》曰：‘鐵有距，施竹頭以擲魚，為銛也。’”

③ 利器。北齊劉晝《新論·適才》：“棠谿之劍，天下之銛也，用之穫穗，曾不如鈎鑣之功也。”元薩都刺《范僉事幽居》：“山人頭如雪，對客口如銛。”

④ 鋒利。《廣雅·釋詁二》：“銛，利也。”《正字通·金部》：“銛，刃利也。”《墨子·親土》：“今有五錐，此其銛。”唐元稹《開元觀酬吳侍御》：“結盟金劍重，斬魅寶刀銛。”明堵允錫《救時二十議疏·明忠義之訓四》：“制器必銛，選藝必精。”

⑤ 姓。《正字通·金部》：“銛，姓。宋銛朴翁，工詩。”

(二) tiǎn 《廣韻》他玷切，上忝透。

挑，挑取。《方言》卷三：“銛，取也。”郭璞注：“謂挑取物。”清翟灝《通俗編·雜字》：“銛，俗失鑣鑰而以他物探之。”章炳麟《致伯仲書·七》：“无钥，可令铜匠銛开。”

(三) guā 《廣韻》古活切，入末見。

斷。《廣雅·釋詁一》：“銛，斷也。”王念孫疏證：“《說文》：‘銛，斷也。从金，昏聲。’隸省作銛。”

Figure 15 Evidence from 汉语大字典第二版 P4520

According to the evidences listed above, U+929B has two completely different pronunciations and meanings. The pronunciation xiān/tiǎn correspond to the phonetic component “甜省”(i.e. 舌); while the pronunciation guā corresponds to the phonetic component “舌”. So the two characters are phonetically, graphically and semantically different and need to be disunified.

Figure 16 U+929B in CodeCharts of Unicode 14.0

In order not to affect the use of the regions where “舌” and “舌” are not distinguished, we suggest to retain guā(i.e. 銛) on U+929B and encode xiān/tiǎn(i.e. 銛) separately.

Glyph	Mandarin	IDS	RS	FS	Variant	Source Reference
銛	xiān tiǎn	金舌	167.6	1	銛 U+931F	GKX-1305.11

Table 4 Information of GKX-1305.11

5. U+46B0 (訖)

G5-7152 is now unified with T3-2F2D. However, the one with the right part “匕” is non-cognate with the another one with the right part “匕”. These two characters have the same case as “叱” and “叱”, which was mentioned in [IRGN2447](#) by Kushim Jiang(姜兆勤) and was already disunified in September, 2021 along with the official release of Unicode 14.0.

Figure 17 U+46B0 in CodeCharts of Unicode 14.0

Figure 18 Evidence from 康熙字典同文書局原版 P1146

訛 (一) pǐ 《集韻》普弭切，上紙滂。
 同“訛”。言具。《集韻·紙韻》：“訛，言具也。或省。”
 (二) é
 同“訛”。《正字通·言部》：“訛，訛字省文。”

Table 5 Information of T3-2F2D

6. U+208B7 (𪗇)

It is widely known that “来” is the simplification form of “來” and shouldn’t be unified. But GKX-0149.39 is unified with T5-5A7C, that seems to be strange.

Figure 25 U+208B7 in CodeCharts of Unicode 14.0

In CNS 11643, only “𪗇” exists; in 教育部異體字字典, both “𪗇” and “𪗇” exist, but all the documentary evidences listed on the page show the glyph “𪗇” while no one shows “𪗇”. Thus we request TCA to give the evidence of “𪗇”, and disunify these two characters; or TCA should probably change the glyph in order to match the evidences.

Glyph	Mandarin	IDS	RS	FS	Variant	Source Reference
𪗇	kǔn	𪗇	19.15	1	𪗇 U+95AB	T5-5A7C

Table 6 Information of T5-5A7C(if disunify)

7. U+216BA (𪗉)

According to the regional conventions in Hong Kong and Taiwan, the right part of “執” is different from “丸”, which can be distinguished by the relative position of the first stroke and the last stroke. These two components are non-cognate. This is also mentioned in the Appendix A of [IRGN2225](#). But U+216BA has both the one with the right part “丸”(wán) and the another with the right part “丸”(jī), thus the two characters need to be disunified.

Figure 26-27 U+216BA in CodeCharts of Unicode 14.0/5.2

Appendix A: Rationale for Inclusion of Z3-03

Z3-03 丸 is included as a separate component from U+4E38 丸. First, they are considered different components in the Taiwan and Hong Kong locale. For characters whose etymology is U+4E2E 𠄎 (to hold), the glyph shape Z3-03 with the dot protruding is used. For characters whose etymology is U+4E38 丸 (small round object), the T/H glyph shape of U+4E38 with the dot not protruding is used.

Figure 28 U+216BA in the Appendix A of [IRGN2225](#)

In both 康熙字典 and 汉语大字典, this character is interpreted as the variation of “尫”, which has the pronunciation fàn and the component “丸”(wán). In HKSCS, it is read jyun4 in Cantonese, which is as same as “丸”. But in CNS 11643, it gives the pronunciations fàn and zhí, while the latter is the variation of “執” and the right component is “丸”(jǐ). The T-source glyph in Unicode 5.2 is “媿”(fàn), but since Unicode 6.0, it has changed to “媿”(zhí).

女大弓戈 (VKNI)	

Figure 29 Evidence from [TCA-CNS 11643\(T6-2443\)](#)

We can see that 明體 has the component “丸”(wán) while 楷體 and 宋體 have the component “丸”(jī).

The screenshot shows the dictionary entry for the character '執' (A00784). At the top, there are navigation buttons: '解說', '異體字', and '研訂瀏覽'. A search bar contains '執' and buttons for '回查詢結果' and '複製引'. Below this is a section titled '異體字' containing two rows of character variants: '執 執 執 執 執 執 執 執 執 執 執 執' and '執 執 執 執 執 執 執 執 執 執 執 執'. The second row has a red box around the character '妣'. Below this is a '說明' section for '妣' (A00784-025). A table provides details: '部首筆畫' is '女 - 03 - 06'; '內容' includes '[關鍵文獻]' and '《古文四聲韻, 入聲, 緝韻》。=> 「妣」之異體。'. On the right, a '形體資料表' section shows a vertical image of a historical document with the character '妣' and its phonetic notation '大徐本' and '字彙'.

Figure 30 Evidence from 教育部異體字字典(A00784)

In 教育部異體字字典, the evidence of “妣”(zhí) refers to 古文四聲韻. Below is the evidence from 古文四聲韻.

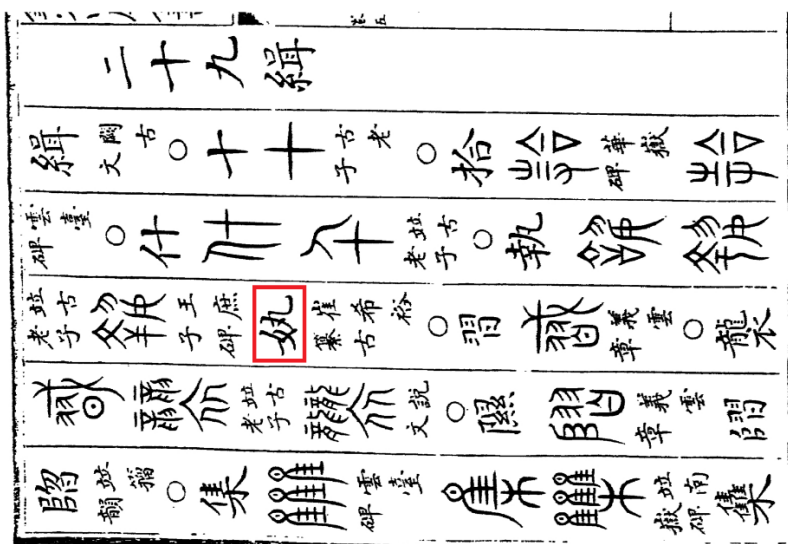

Figure 31 Evidence from 欽定四庫全書 古文四聲韻 卷五 P51

The evidence shows that this character has the same vowel as “緝” in Ancient Chinese, in other words, its Mandarin pronunciation should be zhí. Thus, we suggest TCA consider restoring the glyph on U+216BA to the one in Unicode 5.2, and disunifying “媿” from “媿”.

Glyph	Mandarin	IDS	RS	FS	Variant	Source Reference
媿	zhí	𠃉女丸	38.3	3	執 U+57F7	T13-XXXX

Table 7 Information of 媿(zhí)

8. U+2335F (脛)

U+2F980 脛 is unified with U+2335F 脛 according to [WG2 N2159R](#). However, according to the evidences from G-source and T-source, the two characters need to be disunified. U+2335F has the bottom component 月 and the pronunciation wěi, while U+2F980 has the bottom component 肉 and the pronunciation kěn. Disunifying the characters with the opposition of 月 and 肉 also appeared in [IRGN2239](#), and following 4 characters was successfully disunified in March, 2020 along with the official release of Unicode 13.0.

Char.	Unicode	Radical	Char.	Unicode	Radical
脛	U+4DBA	月	脛	U+80AD	肉
脛	U+4DBB	月	脛	U+43D9	肉
脛	U+4DBC	月	脛	U+440B	肉

脛	U+4DBD	月	脛	U+6721	肉
---	--------	---	---	--------	---

Table 8 Characters with Radical 月 disunified in Unicode 13.0

This character has the same case as the four characters above.

Figure 32 Evidence from 康熙字典同文書局原版 P504

Figure 33 Evidence from 康熙字典同文書局原版 P973

Figure 34 Evidence from 康熙字典同文書局原版 P976

The glyph in P504 has the radical 月, the right side of the two strokes “一” in the component “月” do not contact the stroke “丿”; while the glyphs in P973 and P976 have the radical 肉, the right side of the two strokes “一” in the component “月” do contact the stroke “丿”. This method is commonly used in 康熙字典 in order to distinguish Radical 月 and Radical 肉.

(一) kěn

同“肯”。清高翔麟《說文字通·肉部》：“脛，古文作脛。今作肯。”清劉獻廷《廣陽雜記》卷四：“蓋其平日專用力于近待之人，閣部九卿，全不留意，故滿漢大臣多少之，無人引見……而王輔臣又不肯受以金璧賄賂部臣，惟隨衆常朝而已。”

(二) wěi 《改併四聲篇海》引《搜真玉鏡》烏賄切。

吐。《改併四聲篇海·月部》引《搜真玉鏡》：“脛，吐也。”

Figure 35 Evidence from 汉语大字典第二版 P2194

Although it says “說文·肉部” in the total start, “改併四聲篇海·月部” is written when interpreting the character with the pronunciation wěi.

We can see both the Japanese pronunciation and the radical of the two characters are completely different in [文字情報基盤検索システム](#); in addition, these two characters are also separated in [大漢和辞典](#), with the serial numbers 14334 and 29258 respectively.

Figure 42–43 U+216BA/U+2F980 in CodeCharts of Unicode 14.0

According to the evidences listed above, the two characters are phonetically, graphically and semantically different and need to be disunified. By the way, this character can be horizontally extended by G-source as GKX-0973.20 and J-source as JMJ-037877 if necessary. In addition, the T-source of U+2F980 needs to change to TU-2F980 and the radical needs to change to 肉.

Source:	TianHeng Shen(沈天珩, aka CheonHyeong Sim)
Title:	ADDITION for <i>Disunification request for 8 characters</i>
Status:	Individual Contribution on IRG #58
Action:	To be considered by IRG and China NB

After we had already published the document IRGN2537, we found a 9th character 𠂔(U+43E2) which should also probably to be disunified.

In 康熙字典, there are two characters with the actual shape 𠂔月皮, the abstract shape of the 1st one should be 𠂔{且}{皮}, while the 2nd one should be 𠂔{肉}{皮}, they are completely different and non-cognate.

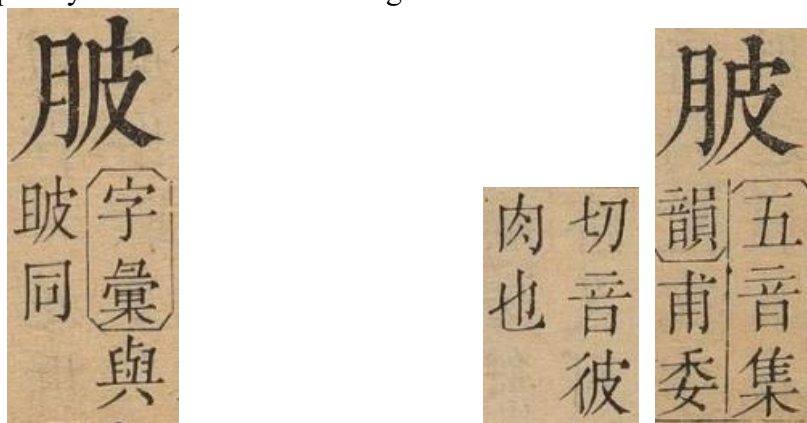

Figure 1–2 Evidences from 康熙字典

In 康熙字典, the normal 月 and the 月{肉} are distinguished by whether the two strokes inside touched the right or not, and we can see that the 𠂔{且}{皮} one uses the normal 月 while the 𠂔{肉}{皮} one uses the 月{肉} form, it seems that 康熙字典 also consider these two characters are different and cannot be mixed. Here is the evidence about the distinguishing rules in 康熙字典:

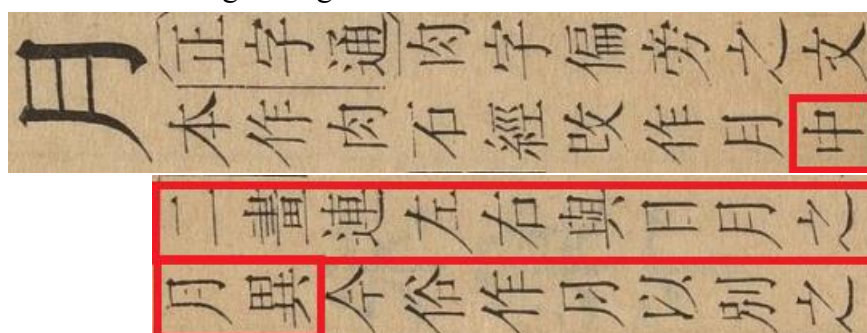

Figure 3 Evidence from 康熙字典

But in 《国家语委十五科技攻关资助项目 – ISO/IEC 10646:2003 CJK 汉字与康熙字典关联表》，the two characters are mixed and both of them are corresponded to U+43E2, so we think that a disunification should be done.

Figure 4 Evidence from 《国家语委……康熙字典关联表》 P212

Additionally, according to 《汎用電子情報交換環境整備プログラム成果報告書》，the two characters are separated, with the serial number #3791 and #3792, and the references referred to 平成明朝, 戸籍統一文字, 登記統一文字 and 大漢和辭典 are all different. The pronunciations are also different.

𠂇	𠂇	𠂇	ソ		
KS255660	255660	00255660		43E2	22838
𠂇	𠂇	𠂇	ヒ		
IA4349	327810	00327810		43E2	29383

Figure 5 Evidence from 《汎用電子……成果報告書》 P316

Meanwhile, 文字情報(aka the successor of 汎用電子) also considers that these two characters are different and they are both encoded in there IVD with the different IVS but the same shape. And it seems to be inappropriate to consider the actual shape 𠂇 purely as a polyphonic character(多音字), because the genuine polyphonic characters are not separated with the different serial number. For example:

車	車	車	車	シャ・キョ・コ・くるま		
JA2854	431960	8ECA	00431960	1-28-54	8ECA	38172
						常人

Figure 6 Evidence from 《汎用電子……成果報告書》 P2129

“車” is a common used polyphonic character regardless whether it is in China, Japan or Korea, while 《汎用電子情報交換環境整備プログラム成果報告書》 put the pronunciations シャ(sha; Chinese: chē; Korean: cha) and キョ・コ(kyo/ko; Chinese: jū; Korean: geo) together after the same character/glyph/references.

Following is the information about 𠂔{且}{皮} if a disunification is accepted. The 𠂔{肉}{皮} one should stay in its original place because the radical of U+43E2 is 肉.

Glyph	Mandarin	IDS	RS	FS	Variant	Source Reference
𠂔	cū	𠂔月皮	107.4	3	𠂔 U+24FDA	GKX-0790.27

Table 1 Information of GKX-0790.27

We suggest China consider disunifying this character.

ISO/IEC JTC1/SC2/IRGN2537_TCA Feedback

Date: 2022-03-11

Doc. Type:	Member body contribution
Title:	TCA's Feedback to IRGN2537
Source:	TCA
Status:	Input to IRG meeting 58
Action:	For consideration by JTC1/SC2/WG2/IRG
Distribution:	IRG Members and Ideographic Experts
No. of pages:	8
Appendixes	None
Medium:	Electronic

IRGN2537 proposed 8 pairs of characters for separate coding, TCA invited experts to discuss and concluded that. This is a very complex issue, TCA hope we can discuss it one group at a time.

1. U+681D (𣎵)	681D 木 75.6	𣎵	𣎵	𣎵	𣎵	𣎵
		G0-6869	HB2-D1EB	T2-2F6D	J13-755F	K1-596E

TCA thought that the glyphs of U+681D are exactly the same and there is no problem of disunified. If experts want to apply for a new character, they can do so at the next open application for a new character set.

(1.1) U+820C 「舌」和「舌」

This item also mentions the glyphs "舌" and "舌". These two characters are worth discussing. According to Shuowen Jiezi, Kangxi and 漢語大字典 say that these are two characters with different phonetic and meanings. **TCA thinks that the coding can be separated**, and looking forward to IRG experts discussing.

The relevant evidences are as follows.

Figure 3 Kangxi Dictionary

2.U+6B25 (𠂔)	<div style="display: inline-block; vertical-align: middle;"> <p style="margin: 0;">6B25 欠 76.4</p> </div> <div style="display: inline-block; vertical-align: middle; margin-left: 10px;"> <p style="font-size: 2em; margin: 0;">𠂔</p> <p style="font-size: 0.8em; margin: 0;">G5-4A39</p> </div> <div style="display: inline-block; vertical-align: middle; margin-left: 10px;"> <p style="font-size: 2em; margin: 0;">𠂔</p> <p style="font-size: 0.8em; margin: 0;">HB2-CCE9</p> </div> <div style="display: inline-block; vertical-align: middle; margin-left: 10px;"> <p style="font-size: 2em; margin: 0;">𠂔</p> <p style="font-size: 0.8em; margin: 0;">T2-274A</p> </div> <div style="display: inline-block; vertical-align: middle; margin-left: 20px;"> <p style="font-size: 2em; margin: 0;">𠂔</p> <p style="font-size: 0.8em; margin: 0;">K2-3E2D</p> </div>
--------------	--

After reading this document, TCA thought it was mainly talking about the fact that there are two glyphs in this group of characters, one is "𠂔" and the other is "𠂔". U+6B25 should be corrected to "𠂔" and it is suggested that a new code be given to "𠂔".

𣎵 (yù) is from *Shuowen Jiezi*, “詮詞也。从欠，从日，日亦聲。” So the left part is "日" form. In the past, the left side of the transcription process was written as "𣎵". because the "日" and"𣎵" form is close, which caused a mix-up.

TCA suggests that U+6B25 should remain unchanged. And IRG's experts can discuss whether to accept "𣎵日欠" as a new character.

3. U+6C97 (𣎵)

6C97 水 85.4	𣎵 GE-3F28	𣎵 𣎵 T3-2963 J14-6E3E
	𣎵 𣎵 MD-6C97 UTC-00763	

Regarding the evolution of "𣎵天氷"和"𣎵天水", it is clear from the figure below that both forms are from "𣎵".

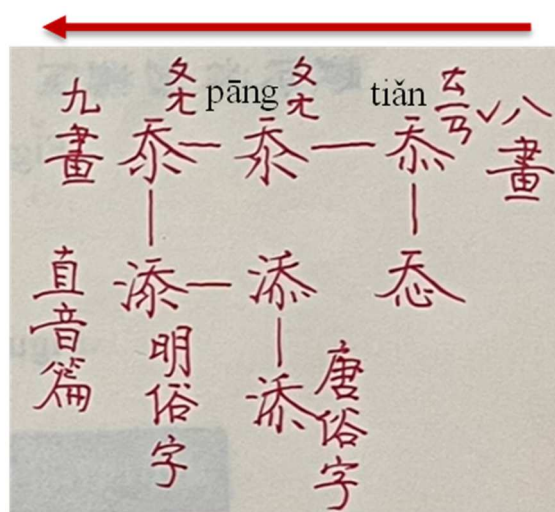

Figure 4 the evolution of 𣎵天氷和𣎵天水(許學仁老師手稿)

In the 《字彙補》, these two characters have the same sound and meaning, and their radicals are classified as 大(37.0)and 水(85.0), see below.

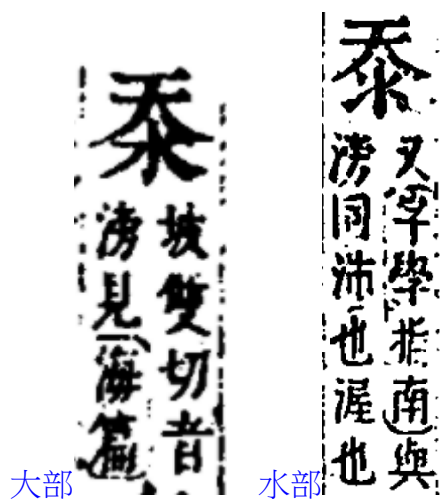

Figure 5 《字彙補·丑集·大部》、《字彙補·巳集·水部》

Therefore, TCA believes that "𠄎天冰" and "𠄎天水" are originally the same character and do not need to be coded separately.

TCA thought that the glyphs of " U+929B 銛" are exactly the same and there is no problem of disunified. If experts want to apply "𠄎金舌" for a new character, they can do so at the next open application for a new character set.

Please see the following figure for the relationship between the three forms: "匕", "匕" and "七". "匕" and "匕" were later mixed. The character U+46B0 are the same glyphs and **do not need to be coded separately.**

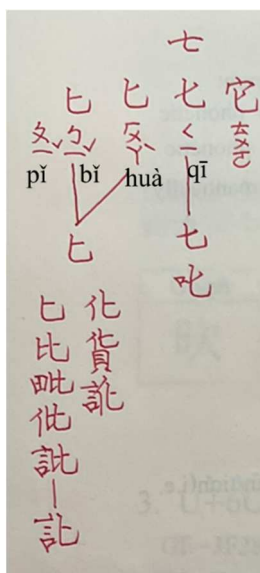

Figure 6 relationship between 匕、匕 and 七(許學仁老師手稿)

6. U+208B7 (𠂇)

208B7
力 19.14

𠂇 𠂇

GKX-0149.39 T5-5A7C

TCA has no specific comments on whether U+208B7 should be coded separately.

7. U+216BA (𡈼)

216BA
女 38.3

𡈼 𡈼

GHZ-21027.01 T6-2443

𡈼
H-9AC1

Regarding U+216BA "𡈼", the TCA expert meeting decided that the T glyphs remain unchanged. The glyph was "𡈼" in CNS 11643:1992 version and changed to "𡈼" in CNS 11643:2007 version.

The reason for TCA's revision of the glyphs is that these two glyphs are now mixed, and TCA has chosen the Kangxi form.

From the figure below, we can clearly see that the Kangxi dictionary and

《字彙補》, the meaning of both characters " 妯 " and " 媯 " are the same.

Figure 7 妯 in the 字彙補 and 康熙字典

The TCA agrees with the proposal to disunified 2F980 and U+2335F, because they are two characters with different sounds and meanings.

As we can see from the figure below, U+2F980 is the ancient character for "肯", with the sound kěn, the radical is 肉(130.0). In the book 四聲篇海, the radical is 月(74.0), with the sound wěi, which means "吐"(to spit).

Figure 8 《說文解字·卷四·肉部》

Figure 9 《四聲篇海·月部》

Source:	TianHeng Shen(沈天珩, aka CheonHyeong Sim)
Title:	FEEDBACK for <i>Disunification request for 8 characters</i>
Status:	Individual Contribution on IRG #58
Action:	To be considered by IRG

In the feedback of TCA, the disunification for U+6B25(𠄎) is not accepted. It is not hard to accept their reason for not disunifying the character since T2–274A on U+6B25 is yì/yù, which refers to the abstract shape 𠄎{日}{欠}, even if its actual shape is 𠄎日欠. Actually, unlike IRGN2519, IRGN2537 is not only proposed to TCA, so we are also looking forward to the decisions of other participants, but before that, we would like to apply for encoding 𠄎{日}{欠} as an **URGENTLY NEEDED CHARACTER**.

Firstly, in the feedback of TCA, they also said that “U+6B25 should be **corrected** to 𠄎日欠 and it is suggested that **a new code be given to 𠄎日欠**”. Since it is obviously that the two characters are phonetically, graphically and semantically different, it is necessary to encode separately.

Secondly, it will be the only unencoded character in 康熙字典 if the character is not encoded. The another character with a same situation(aka U+2335F) is already accepted by TCA for disunification so it is likely to be encoded as an urgently needed character. In [L2/21–236](#), 14 characters in 康熙字典 were proposed to have a horizontal extension or to be encoded separately. Although these characters have large differences with the characters already included in Unicode, but due to the cognition they are finally unaccepted by UTC. We firmly believe that except for the characters mentioned in IRGN2537 and L2/21–236, all the characters in 康熙字典 are already included in Unicode, since the characters in L2/21–236 are all rejected due to the cognition and suggested to submit as IVDs(indeed, we are preparing the IVD collection for 康熙字典 on Glyphwiki, and about 20 thousand characters are done so far, see [the edit records of simch–kx](#) for reference), and U+2335F is accepted by TCA for disunification, 𠄎日欠 is certainly the only one remaining unencoded. Also, unlike the characters in L2/21–236, 𠄎日欠 is non–cognate with 𠄎日欠, which cannot be rejected for the similar reason.

Finally, according to 《国家语委十五科技攻关资助项目 – ISO/IEC 10646:2003 CJK 汉字与康熙字典关联表》, 𠄎日欠 was wrongly unified to 𠄎日欠, so it was not included in the appendix for the unencoded characters at that time and was not submitted to any working set later. We have reasons to believe that, current G5–

4A39 mixed up 𠄎日欠 and 𠄎日欠. We believe that T2-274A only refers to 𠄎日欠 and we do not know whether K2-3E2D mixed up or not, but at least, G5-4A39 mixed up so, besides applying for the UNC, we also hope China to consider disunifying G5-4A39 and encoding GKX-1600.50 at the end of CJK-ExtC.

Figure 1 Evidence from 《国家语委……康熙字典关联表》 P65

Glyph	Mandarin	IDS	RS	FS	Variant	Source Reference
𠄎	huān	𠄎日欠	72.4	3	/	GKX-1600.50

Table 1 Information of GKX-1600.50 (There was a typo in the original file)

Given the importance of 康熙字典, and the convenience for the preparation of 康熙字典-IVD-collection, we sincerely hope that **the only** unencoded character 𠄎日欠 can be included in Unicode15.0 as an **URGENTLY NEEDED CHARACTER**.

(End of document)
