

Title: Recommendation on flagging optional evidence images in ORT meeting mode
Source: Wang Xieyang (王谢杨)
Status: Individual Contribution
Action: For consideration by IRG

In order to ensure that experts can post helpful additional evidence images in the ORT for ideographs that already have sufficient evidence, which would be considered optional, and efficiently identifying doubts about ideographs while reviewing ORT comments during IRG meetings, I recommend that we add Evidence > NEW_EVIDENCE_IGNORE to the ORT as a new comment type for optional additional evidence images, which would not appear in the "Evidence" column when in meeting mode.
