**Title:** Recommendations for resolving long-standing G3 and G5 issues

**Source:** Ken Lunde

**Distribution:** IRG

**Date:** 2025-08-25

This document recommends [kIRG\\_GSource](#) (aka G-source) property value changes, along with [kGB3](#) and [kGB5](#) property value changes, removals, and additions, based on what the author believes to be long-standing one-off property value errors that affect the “G3” and “G5” source prefixes of the normative [kIRG\\_GSource](#) property, along with the provisional [kGB3](#) and [kGB5](#) properties.

Almost all of the [kIRG\\_GSource](#) property value issues that are referenced in this document were first raised in Part 1 of document [IRG N2302](#) (Li) to which China responded in document [IRG N2376](#) as follows:

*No change for the G3 and G5 characters.*

However, considering that the provisional [kGB3](#) and [kGB5](#) properties pre-date the [kIRG\\_GSource](#) property, and that the UTC CJK & Unihan Working Group is attempting to complete them with contributions from Harriet Riddle (aka Har) and other IRG experts, it seems prudent to re-visit these [kIRG\\_GSource](#) property value issues, and to resolve the corresponding [kGB3](#) and [kGB5](#) property value issues.

See Sections 3, 4, and 5 on pp 10 through 12 of this document for a complete history of the [kGB3](#) and [kGB5](#) properties, and the “G3” and “G5” prefixes of the [kIRG\\_GSource](#) property.

All of the recommended property value changes, removals, and additions are included inline in this document, and are also included in the “plain text” [n2863-attachment.txt](#) data file that is PDF attachment.

### 1) Recommended G3 Changes, Removals & Additions

Note that the “G Column” glyphs for the yellow-highlighted U+50B1, U+5051, U+4FF4, U+5032, U+3473, and U+3491 UCS code points do not match the “GB/T 7589” glyphs, because the former ideographs are the corresponding unsimplified (aka traditional) forms of the latter ideographs. The simplified form of U+50B1 is encoded in Extension G as U+30067 (UK-01677), the simplified form of U+5051 is encoded in Extension A as U+343D (G7-2325), the simplified form of U+4FF4 is encoded in Extension B as U+20219 (GCA-I0038), the simplified form of U+5032 is encoded in Extension A as U+3448 (G7-2323), and the simplified form of U+3473 is encoded in Extension A as U+3447 (G7-223F), all of which are shown in the “GB/T 7589” column above. The simplified form of U+3491 does not appear to be encoded nor is in the pipeline for encoding.

Below are the current *kGB3* and *kIRG\_GSource* property values that have not changed since Unicode Version 1.1 (*kGB3*; with the exception of U+3473 and U+3491 that were added in Unicode Version 17.0) or Unicode Version 6.0 (*kIRG\_GSource*):

Note that the “G Column” glyphs for the yellow-highlighted U+7C3B, U+7C05, U+7C24, and U+270D2 UCS code points do not match the “GB/T 7590” glyphs, because the former ideographs are the corresponding unsimplified (aka traditional) forms of the latter ideographs. The simplified form of U+7C3B is encoded in Extension G as U+30A7B (UK-01926), and the simplified form of U+270D2 is encoded in Extension J as U+32F41 (GKJ-00786), both of which are shown in the “GB/T 7590” column above. The simplified forms of U+7C05 and U+7C24 do not appear to be encoded nor are in the pipeline for encoding.
