TCA found two error T-glyphs in CJK Unified Ideographs (U+6BD2 & U+93BF), which are necessary to modify. These two glyphs will be modified to the new and right T-glyph if the request been accepted by IRG.

1. U+6BD2

   (1) **Introduction**

   The current T-glyph for U+6BD2 in the code charts is shown as below.

   ![Image of T-glyph for U+6BD2]

   In the code charts of CNS 11643:2007, the glyph of the T-source of U+6BD2 (i.e., T1-5175) is shown in following figure:
The first and second planes of CNS 11643 (character code prefixed by T1- and T2-, respectively) include all most frequently used Chinese characters that are normalized by the MOE. It means the T1-5175 is one of the normalized most frequently used Chinese character. The evidence is shown below.
Besides, in the Full Repertoire of CNS 11643 (全字庫), the font of T1-5175 also shown as “毒”. See the evidence below.
(2) Proposal

According to the fonts of T1-5175 in code chart of CNS 11643, in MOE’s publication mentioned above and in the Full Repertoire of CNS 11643, TCA would like to modify the font of T-glyph of U+6BD2 shown as following. It does not need to change the RS information.

<table>
<thead>
<tr>
<th>UCS</th>
<th>Old Glyph</th>
<th>New Glyph</th>
</tr>
</thead>
<tbody>
<tr>
<td>U+6BD2</td>
<td>毒</td>
<td>毒</td>
</tr>
</tbody>
</table>
2. U+93BF  

(1) Introduction

The current T-glyph for U+93BF in the code charts is shown below.

![Glyph Image]

In the code charts of CNS 11643:2007, the glyph of the T-source of U+93BF (i.e., TF-6143) is shown in following figure:

![CNS 11643 Chart]

Although both in the UCS code table and the CNS 11643:2007 code table, the font of TF-6143 are same, but its stroke count 16 is far from the of stroke counts 10 of the ideographs characters before and after. Therefore, verify the T-glyph in the Super CJK14.0 and U+93BF shown as “鎿”, as shown below:
Based on the stroke count and the earlier glyph in SuperCJK, the glyphs of TF-6143 shown in UCS code chart and in CNS 11643 code chart are wrong. In the Full Repertoire of CNS 11643, the font of TF-6143 has been modified to “鎉”. The BMSI will correct the font of TF-6143 in next version of CNS 11643.

(2) Proposal

As mentioned above, TCA would like to suggest to change the T-glyph of U+93BF to be “鎿”, shown as following.

<table>
<thead>
<tr>
<th>UCS</th>
<th>Old Glyph</th>
<th>New Glyph</th>
</tr>
</thead>
<tbody>
<tr>
<td>U+93BF</td>
<td>长</td>
<td>镇</td>
</tr>
</tbody>
</table>
