Doc Type: Working Group Document
 Title: Proposal to remove 2 characters from Extension J
 Source: China
 Status: National Body Contribution
 Author : TAO Yang
 Action: For consideration by JTC1/SC2/WG2
 Date: 2024-11-04

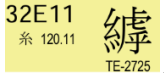

There are 2 characters have been agreed by IRG members to be removed from Extension J.

The 1st is 

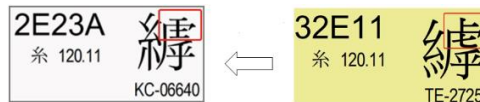

The character UK-20710 (IRG Working Set 2021 #04356) should be removed from the Extension J block for it contains ㄩ (U+2637, 坤卦) which is not a CJKUI or Han-component. CJKUIs are characters combined by Character Description Component (CDC), which have been defined in the PnP of IRG:

Character Description Component (CDC): It refers to any symbols that can be used with the Ideograph Description Characters to form an Ideograph Description Sequence. It includes all coded CJK unified ideographs, Kangxi Radicals, CJK Radical Supplements, and coded CJK Compatibility ideographs.

UK-20710 doesn't match the principle.

The 2nd is 

IRG 63# determined to change the up-right component of U+2E23A 縹 (KC-06640) to 纈, the T-source glyph of U+32E11 (TE-2725) in CJK Ext.J (draft) should be unified to U+2E23A.

Another mistake should be revised either in page 3246.

The scope of the code points of Ext.J should be 323B0-3347B.
